Kin Recognition And Oviposition Strategies In Aphidophagous Ladybirds:

Kin Recognition And Oviposition Strategies Priyanka Saxena, Omkar, 2012 *Pests and Their Management*

Omkar, 2018-08-01 This book comprehensively compiles information on some of the major pests that afflict agricultural horticultural and medicinal crops in particular as well as many polyphagous pests. Not only does this book deal with the pests of common globally produced crops, it also addresses those of rarely dealt with crops such as seed spices, medicinal and aromatic plants. While the perspective of insect pests is largely Indian and South East Asian in context, the book does deal with globally problematic pests, particularly polyphagous ones. Not only will the readers be acquainted with the pests, their damaging potential and their life cycle, but also with the latest methods of managements, including ecofriendly measures being employed to keep pest populations at manageable levels. The 27 chapters in the book are grouped into four sections, primarily based on crop types: viz. pest of agricultural, horticultural and medicinal crops and polyphagous pests, making the book easy to navigate. Each of the chapters is comprehensive and well illustrated and written by academicians who have dedicated their entire lives to the study of a particular crop-pest complex. The final chapter of this book provides an overview on the principles and processes of pest management.

Industrial Entomology Omkar, 2017-02-13 This book is a compilation of writings focused on conventional and unconventional insect products. Some of these products are commercial successes while others are waiting to be launched and are the potential produce of the future. In addition to the well-known products, honey, mulberry silk and lac, the book primarily concentrates on silk-producing insects other than the mulberry silkworm, insects as food, as sources of medicines, pest and weed managers and as pollinators. The book highlights the all-pervasive role of insects in improving human lives at multiple levels. Accordingly, while most books on insects concentrate on how to limit growth in their population, it instead focuses on how to propagate them. In each chapter, the book brings to the fore how insects are far more beneficial to us than their well-publicised harmful roles. This book approaches both unconventional and conventional insect products such as honey, silk and lac in much more depth than the available literature. It investigates different aspects of the production of these insects such as the related processes, problems and utilities in dedicated chapters. Because this book deals with the production of insects or their produce, it has been named *Industrial Entomology*, perhaps the only book that truly reveals the tremendous potential of insects to help humans live better lives. Based on the research and working experience of the contributors who are global experts in their respective fields, it provides authentic, authoritative and updated information on these topics. The book offers a unique guide for students, teachers, policy planners, small-scale industrialists and government ministries of agriculture and industry across the globe. It will provide a much required stimulus to insect appreciation and generate enthusiasm for research and the broader acceptance for insect produce. Hopefully, it will also present the Indian perspective on these topics to a global readership.

Commercial Insects
Professor Omkar, 2023-12-22 Despite being the biggest group of organisms inhabiting Earth in both diversity and sheer

numbers insects are barely commercialized Most of the standard textbooks of applied entomology talk about insect pest management and when it comes to commercial aspects of insects only apiculture sericulture and lac culture are talked about This book will help bring other commercial uses of insects and their economic potential to the fore This will generate interest in further research on the commercial potential of insects thereby harnessing a much found resource The book has the following salient features 1 Encompasses all major aspects of beneficial and commercial insects 2 Deals with edible insects and mass culture of natural enemies and beneficial insects 3 Emphasis on the mass cultivation of beneficial insects for obtaining yields 4 Discusses stingless bees and their products 5 Helps to solve the problem of food scarcity and improve food security

Ecology and Behaviour of the Ladybird Beetles (Coccinellidae) Ivo Hodek,A. Honek,Helmut F. van Emden,2012-04-19 Ladybirds are probably the best known predators of aphids and coccids in the world though this greatly underestimates the diversity of their biology Maximising their impact on their prey is an important element in modern conservation biological control of indigenous natural enemies in contrast to the classical approach of releasing alien species Ivo Hodek is one of the most internationally respected experts on coccinellids who has researched these insects for his entire career He has now brought together 14 scientists of international standing to author 12 chapters making this book the definitive treatment of coccinellid biology and ecology This volume covers the rapid scientific developments of recent years in the understanding of coccinellid phylogeny the semiochemicals influencing their behaviour and of molecular genetics Recent insights in relation to intraguild predation and the assessment of the predatory impact of coccinellids are also covered Other special features of the volume are the extensive references covering the literature from both East and West and a taxonomic glossary of the up to date nomenclature for species of coccinellids as well as of other organisms mentioned in the text While aimed at researchers university teachers and agricultural entomologists the book is readable and appropriate for others who just have a liking for these interesting and attractive insects
