Learning Policy David K. Cohen, Heather C. Hill, 2008-10-01 Education reformers and policymakers argue that improved students learning requires stronger academic standards stiffer state tests and accountability for students scores Yet these efforts seem not to be succeeding in many states The authors of this important book argue that effective state reform depends on conditions which most reforms ignore coherence in practice as well as policy and opportunities for professional learning The book draws on a decade s detailed study of California s ambitious and controversial program to improve mathematics teaching and learning Researchers David Cohen and Heather Hill report that state policy influenced teaching and learning when there was consistency among the tests and other policy instruments when there was consistency among the curricula and other instruments of classroom practice and when teachers had substantial opportunities to learn the practices proposed by the policy These conditions were met for a minority of elementary school teachers in California When the conditions were met for teachers students had higher scores on state math tests The book also shows that for most teachers the reform ended with consistency in state policy They did not have access to consistent instruments of classroom practice nor did they have opportunities to learn the new practices which state policymakers proposed In these cases neither teachers nor their students benefited from the state reform This book offers insights into the ways policy and practice can be linked in successful educational reform and shows

why such linkage has been difficult to achieve It offers useful advice for practitioners and policymakers seeking to improve education and to analysts seeking to understand it Cases on Technology Integration in Mathematics Education Polly, Drew,2014-09-30 Common Core education standards establish a clear set of specific ideas and skills that all students should be able to comprehend at each grade level In an effort to meet these standards educators are turning to technology for improved learning outcomes Cases on Technology Integration in Mathematics Education provides a compilation of cases and vignettes about the application of technology in the classroom in order to enhance student understanding of math concepts This book is a timely reference source for mathematics educators educational technologists and school district leaders employed in the mathematics education or educational technology fields **The Great Curriculum Debate** Tom Loveless,2004-05-13 Since the early twentieth century American educators have been engaged in a heated debate over what schools should teach and how they should teach it The partisans education progressives and education traditionalists have usually kept their disagreements within the walls of the nation s schools of education Periodically however arguments have erupted which have generated headlines and attracted public attention making clear the potential for bitterness and rancor in education politics In the 1990s progressives and traditionalists squared off in a dispute over reading and mathematics Arguments over how best to teach these two subjects is detailed in The Great Curriculum Debate How Should We Teach Reading and Math This book includes contributions from distinguished scholars from both sides of the debate as well as influential nonpartisans The proponents of whole language and phonics present their opposing views on reading Advocates and opponents of NCTM math reform the agenda of the National Council of Teachers of Mathematics NCTM discuss their differing opinions about math Although the authors disagree on many of the most important aspects of learning they agree on one point the school curriculum matters Decisions made now about the content of reading and mathematics will have long term consequences not only for students and schools but for society as a whole Contributors include E D Hirsch Jr University of Virginia Gail Burrill Mathematical Sciences Education Board Michael T Battista Kent State University David C Geary University of Missouri Columbia Roger Shouse Penn State University Adam Gamoran University of Wisconsin Madison Richard Askey University of Wisconsin Madison Diane Ravitch New York University Catherine E Snow Harvard University Margaret Moustafa California State University LA Richard L Allington University of Florida William Lowe Boyd Penn State University a **Helping Children Learn Mathematics** Robert E. The Education Digest, 1967. The editorial aim is to present condensations of articles taken from the leading professional and lay publications. **The Elementary School Journal**, 1982. *Visualisation and Epistemological Access to Mathematics Education in Southern Africa* Marc Schäfer, 2023-04-27. This book demonstrates that using visualisation processes in mathematics education can help to enhance teaching and learning and bridge the inequality gap that exists between well-resourced and under-resourced schools in Southern Africa. Drawing on classroom research conducted in the Southern African region, it examines how epistemological access in a context of gross inequality can be constructively addressed by providing research-based solutions and recommendations. The book outlines the visualisation process as an integral but often overlooked process of mathematics teaching and learning. It goes beyond the traditional understanding of visualisation processes such as picture forming and using tools and considers visualisation processes that are semiotic in nature and includes actions such as gestures in combination with language. It adds value to the visualisation in mathematics education research discourse and deliberation in Africa. With a unique focus on Southern Africa and open avenues for further research and collaboration in the region, it will be a highly relevant reading for researchers, academics and postgraduate students of mathematics education, comparative education and social justice education. Elementary and Middle School Mathematics John A. Van de Walle, 2004. *World Windows* introduces young learners to essential themes and concepts in Science and Social Studies through National Geographic photography and content. Using non-fiction readings, *World Windows* helps to develop young learners' fluency in English and ignites their curiosity about the world around them.
