King Of Fish The Thousand Year Run Of Salmon:

King of Fish David R. Montgomery, 2003-10-08 A natural history of the rise and fall of salmon in England New England and the Pacific Northwest cites the roles of the regions changing landscapes and experimentation in the evolution and near extinction of the species making predictions about recovery efforts and the prospects of the natural world 40 000 first printing

David S. Wilcove, 2007-11 Animal migration is a magnificent sight a mile long blanket of cranes rising from a Nebraska river and filling the sky hundreds of thousands of wildebeests marching across the Serengeti a blaze of orange as millions of monarch butterflies spread their wings to take flight Nature s great migrations have captivated countless spectators none more so than premier ecologist David S Wilcove In No Way Home his awe is palpable as are the growing threats to migratory animals We may be witnessing a dying phenomenon among many species Migration has always been arduous but today s travelers face unprecedented dangers Skyscrapers and cell towers lure birds and bats to untimely deaths fences and farms block herds of antelope salmon are caught en route between ocean and river breeding and wintering grounds are paved over or plowed and global warming disrupts the synchronized schedules of predators and prey The result is a dramatic decline in the number of migrants Wilcove guides us on their treacherous journeys describing the barriers to migration and exploring what compels animals to keep on trekking He also brings to life the adventures of scientists who study migrants Often as bold as their subjects researchers speed wildly along deserted roads to track birds soaring overhead explore glaciers in search of frozen locusts and outfit dragonflies with transmitters weighing less than one one hundredth of an ounce Scientific discoveries and advanced technologies are helping us to understand migrations better but alone they won t stop sea turtles and songbirds from going the way of the bison or passenger pigeon What s required is the commitment and cooperation of the far flung countries migrants cross long before extinction is a threat As Wilcove writes protecting the abundance of migration is key to protecting the glory of migration No Way Home offers powerful inspiration to preserve those glorious journeys

The Living Shore Rowan Jacobsen, 2009-07-01 In the 1990s a marine scientist named Brian Kingzett was commissioned to survey Canada s western coast He saw amazing sights from the wildest most breathtaking coasts to the smallest of marine creatures Along the western side of Vancouver Island Kingzett nosed into an isolated pocket beach where he found something unusual Amid the mussels barnacles and clams were round oysters Olympias Kingzett noted their presence and paddled on A decade later when he met Betsy Peabody executive director of the Puget Sound Restoration Fund PSRF he learned that this once ubiquitous native oyster was in steep decline and he knew that together they would return to this remote spot Rowan Jacobsen along with Kingzett Peabody and a small group of scientists from PSRF and the Nature Conservancy set out last July to see if the Olys were still surviving and if they were what they could learn from them The goal to use their pristine natural beds which have probably been around for millennia as blueprints for the habitat restoration efforts in Puget Sound The implications are vast If Peabody and her team can bring good health back

to Puget Sound by restoring the intertidal zones the areas of land exposed during low tide and submerged during high tide where oysters live their research could serve as a model for saving the world's oceans During a time when the fate of the oceans seems uncertain Rowan Jacobsen has found hope in the form of a small shelled creature living in the lost world where all life began

American Environmental History Carolyn Merchant, 2007 By studying the many ways diverse peoples have changed shaped and conserved the natural world over time environmental historians provide insight into humanity's unique relationship with nature and more importantly are better able to understand the origins of our current environmental crisis Beginning with the precolonial land use practice of Native Americans and concluding with our twenty first century concerns over our global ecological crisis American Environmental History addresses contentious issues such as the preservation of the wilderness the expulsion of native peoples from national parks and population growth and considers the formative forces of gender race and class Entries address a range of topics from the impact of rice cultivation slavery and the growth of the automobile suburb to the effects of the Russian sea otter trade Columbia River salmon fisheries the environmental justice movement and globalization This illustrated reference is an essential companion for students interested in the ongoing transformation of the American landscape and the conflicts over its resources and conservation It makes rich use of the tools and resources climatic and geological data court records archaeological digs and the writings of naturalists that environmental historians rely on to conduct their research The volume also includes a compendium of significant people concepts events agencies and legislation and an extensive bibliography of critical films books and Web sites

Steward's Fork James K. Agee, 2007-07-05 A compelling story of place Steward's Fork explores northwest California's magnificent Klamath Mountains a region that boasts a remarkable biodiversity a terrain so rugged that significant landscape features are still being discovered there and a wealth of natural resources that have been used and more recently abused by humans for millennia James K Agee a forest ecologist with more than fifty years experience in the Klamaths provides a multidimensional perspective on this region and asks how can we most effectively steward this spectacular landscape toward a sustainable future In an engaging narrative laced with personal anecdotes he introduces the dynamics of the Klamath's ecosystems including its geology and diverse flora and fauna and then discusses its native cultures and more recent inhabitants laying out the effects of industries such as logging mining water development and fishing Assuming that people will continue to have a close tie to the Klamaths Agee introduces the principles of restoration ecology to offer a vision of how we can responsibly meet the needs of both people and natural organisms including plants fish and wildlife This debate over the future of the Klamath's rich landscape widens into a provocative meditation on nature culture and our relationship with the earth itself

Contaminants and Ecological Subsidies Johanna M. Kraus, David M. Walters, Marc A. Mills, 2020-10-15 This volume explores the effects of aquatic contaminants on ecological subsidies and food web exposure at the boundary of aquatic and terrestrial ecosystems It provides the first synthesis of the findings and

principles governing the dark side of contaminant effects on ecological subsidies Furthermore the volume provides extensive coverage of the tools being developed to help managers and researchers better understand the implications of contaminants movement and their effects on natural resources and ecosystem processes Aquatic and terrestrial ecosystems are linked through movements of energy and nutrients which subsidize recipient food webs As a result contaminants that concentrate in aquatic systems because of the effects of gravity on water and organic matter have the potential to impact both aquatic and terrestrial ecosystem processes Within the last decade increased attention has been paid to this phenomenon particularly the effects of aquatic contaminants on resource and contaminant export to terrestrial consumers and the potential implications for management This volume curated and edited by three field leaders incorporates empirical results management applications and theoretical synthesis and is a key reference for academics government researchers and consultants **The**

Genius of the Beast Howard Bloom, 2010-05-01 Is global capitalism on its last legs Is the era of American leadership over Has the West begun a decline into a new Dark Age Does American civilization deserve to survive These are the unnerving questions raised by the Great Crash of 2009 This book presents a radically new answer insisting that global society has only begun to realize its full potential Author Howard Bloom argues that there s a hidden mandate beneath the surface of capitalism It s struggling to whisper and rumble its message to you and me That hidden imperative can lift us from economic crisis can make us a leader in the next generation economy and can dramatically upgrade our ability to empower our fellow human beings Bloom sees crisis as opportunity opportunity for the whole human race In more than eighty short fast chapters insights appear suddenly like the quick bursts of flashbulbs taking the reader on a sweeping tour of human history from the Stone Age to the present Every chapter conveys a radically new way to see the astonishing mechanism we call Western Civilization Bloom marvels at how humans have turned toxic waste into food and fuel trash into treasure and garbage into gold He shows how we ve produced material miracles based on immaterial things passion persistence and fantasy He shows that what many regard as the end is just the beginning The beginning of something you ve never before imagined The author explains why the secret to capitalism s next great leap does not lie in new financial tricks but in tapping things right under our noses in radically new ways that is tapping our imagination our desire to feel useful our desire to help others and our desire to be recognized for contributing to the welfare of humanity The key to next generation capitalism lies in a big picture view that s utterly unlike anything you ve previously perceived A big picture view that will startle you A big picture view with which you can ignite the world get a new handle on your life and help transform society This brilliant inspirational work of daring ideas and breathtaking research offers more than hope It offers unseen levels of understanding Understanding that can literally redefine what it means to be a human being Bottomfeeder Taras Grescoe, 2011-01-15 Dividing his sensibilities between Epicureanism and ethics Taras Grescoe set out on a nine month world wide search for a delicious and humane plate of seafood Along the way he explains the cultural and commercial implications of fish production on our

environment our health and our seas At once entertaining and illuminating Bottomfeeder is a thoroughly enjoyable narrative about the world's cuisines and an examination of the fishing and farming practices we take too easily for granted **The West without Water** B. Lynn Ingram, Frances Malamud-Roam, 2013-08-01 The West without Water documents the tumultuous climate of the American West over twenty millennia with tales of past droughts and deluges and predictions about the impacts of future climate change on water resources Looking at the region's current water crisis from the perspective of its climate history the authors ask the central question of what is normal climate for the West and whether the relatively benign climate of the past century will continue into the future The West without Water merges climate and paleoclimate research from a wide variety of sources as it introduces readers to key discoveries in cracking the secrets of the region's climatic past It demonstrates that extended droughts and catastrophic floods have plagued the West with regularity over the past two millennia and recounts the most disastrous flood in the history of California and the West which occurred in 1861-62 The authors show that while the West may have temporarily buffered itself from such harsh climatic swings by creating artificial environments and human landscapes our modern civilization may be ill prepared for the future climate changes that are predicted to beset the region They warn that it is time to face the realities of the past and prepare for a future in which fresh water may be less reliable **Romanticism, Rhetoric and the Search for the Sublime, 2nd Edition** Craig R. Smith, 2023-01-23 Relying on the author's established expertise in rhetoric and political communication this book re-contextualizes Romantic rhetorical theory from the late 18th and early 19th centuries to provide a foundation for a Neo Romantic rhetorical theory for our own time In the process it uses a unique methodology to correct misconceptions about the rhetorical theories of many writers Using a dialectical approach the early chapters trace Romanticism through its opposition to the industrial revolution and the Enlightenment back through Humanism and its opposition to Scholasticism to its roots in St Augustine's writing These chapters include a revisionist analysis of the church's treatment of Galileo in the course of showing how difficult it was for scientific study to be accepted in Scholastic circles The study goes on to argue that Jean Jacques Rousseau David Hume and Edmund Burke were bridge figures to the Romantic Era This move throws new light on exemplary painters composers writers and orators of the Romantic Era who are examined in chapters eight and nine Chapter ten focuses on Percy Bysshe Shelley and his development of the rhetorical poem and thereby provides a new genre in the Romantic catalogue Chapter Eleven turns to the Romantic rhetorical theories of Hugh Blair and Thomas De Quincey to empower those seeking to save the environment The concluding chapter then synthesizes their theories with relevant contemporary rhetorical theories thereby constructing a Neo Romantic theory for our own time In the process the book links the Romantics' love of nature to the current environmental crisis *Onearth*, 2001 *The Boatman* Robert M. Thorson, 2017-04-24 Robert Thorson gives readers a Thoreau for the Anthropocene The boatman and backyard naturalist was keenly aware of the way humans had altered the waterways and meadows of his beloved Concord River Valley Yet he sought

out for solace and pleasure those river sites most dramatically altered by human invention and intervention for better and worse Wild Salmonids in the Urbanizing Pacific Northwest J. Alan Yeakley, Kathleen G. Maas-Hebner, Robert M. Hughes, 2013-11-20 Wild salmon trout char grayling and whitefish collectively salmonids have been a significant local food and cultural resource for Pacific Northwest peoples for millennia The location size and distribution of urban areas along streams rivers estuaries and coasts directly and indirectly alter and degrade wild salmonid populations and their habitats Although urban and exurban areas typically cover a smaller fraction of the landscape than other land uses combined they have profound consequences for local ecosystems aquatic and terrestrial populations and water quality and quantity **The Archaeology of North Pacific Fisheries** Madonna L. Moss, Aubrey Cannon, 2011-11-15 For thousands of years fisheries were crucial to the sustenance of the First Peoples of the Pacific Coast Yet human impact has left us with a woefully incomplete understanding of their histories prior to the industrial era Covering Alaska British Columbia and Puget Sound The Archaeology of North Pacific Fisheries illustrates how the archaeological record reveals new information about ancient ways of life and the histories of key species Individual chapters cover salmon as well as a number of lesser known species abundant in archaeological sites including pacific cod herring rockfish eulachon and hake In turn this ecological history informs suggestions for sustainable fishing in today s rapidly changing environment Antarctica and the Arctic Circle Andrew J. Hund, 2014-10-14 This one stop reference is a perfect resource for anyone interested in the North and South Poles whether their interest relates to history wildlife or the geography of these regions in the news today Global warming a hot topic among scholars of geography and science has led to increased interest in studying the earth s polar ice caps which seem to be melting at an alarming rate This accessible two volume encyclopedia lays a foundation for understanding global warming and other issues related to the North and South Poles Approximately 350 alphabetically arranged user friendly entries treat key terms and topics important expeditions major figures territorial disputes and much more Readers will find information on the explorations of Cook Scott Amundsen and Peary articles on humpback whales penguins and polar bears and explanations of natural phenomena like the Aurora Australis and the polar night Expedition tourism is covered as is climate change Ideal for high school and undergraduate students studying geography social studies history and earth science the encyclopedia will provide a better understanding of these remote and unfamiliar lands and their place in today s world Ecology of North American Freshwater Fishes Stephen T. Ross, 2013-06-01 The North American freshwater fish fauna is the most diverse and thoroughly researched temperate fish fauna in the world Ecology of North American Freshwater Fishes is the only textbook to provide advanced undergraduate and graduate students and researchers with an up to date and integrated view of the ecological and evolutionary concepts principles and processes involved in the formation and maintenance of this fauna Ecology of North American Freshwater Fishes provides readers with a broad understanding of why specific species and assemblages occur in particular places Additionally the text explores how individuals and species

interact with each other and with their environments how such interactions have been altered by anthropogenic impacts and the relative success of efforts to restore damaged ecosystems This book is designed for use in courses related to aquatic and fish ecology fish biology ichthyology and related advanced ecology and conservation courses and is divided into five sections for ease of use Chapter summaries supplemental reading lists online sources extensive figures and color photography are included to guide readers through the material and facilitate student learning Part 1 Faunal origins evolution and diversity Presents a broad picture both spatially and temporally of the derivation of the fauna including global and regional geological and climatological processes and their effects on North American fishes Part 2 Formation maintenance and persistence of local populations and assemblages Focuses on how local fish populations and assemblages are formed and how they persist or not through time Part 3 Form and function Deals with the relationship of body form and life history patterns as they are related to ecological functions Part 4 Interactions among individuals and species Discusses the numerous interactions among individuals and species through communication competition predation mutualism and facilitation Part 5 Issues in conservation Focuses on several primary conservation issues such as flow alterations and the increasing biotic homogenization of faunas
