Concrete Structures for Oil and Gas Fields in Hostile Marine Environments fib Fédération internationale du béton, 2008-12-01 Concrete offshore structures have been successfully delivered to the international oil and gas industry for more than 35 years. Some 50 major concrete platforms of different shapes and sizes supporting large production and storage facilities are currently operating in hostile marine environments worldwide and have excellent service records. After some years with little development activity, today there is a renewed interest in robust structures for the Arctic environment for Liquefied Natural Gas (LNG) terminals and for special floating barges and vessels. Currently, concrete solutions are being considered for projects north and east of Russia, north of Norway and offshore Newfoundland, among others. Concrete is also in increasing demand in built-up coastal areas for a variety of purposes such as harbour works, tunnels and bridges, cargo terminals, parking garages and sea front housing developments where durability and robustness are essential. The mandate of fib Task Group 1.5 was to gather the experience and know-how pertinent to the development, design and execution of offshore concrete structures and to elaborate on the applicability of concrete structures for the Arctic environments. The findings of the Task Group are presented in fib Bulletin 50. The report is based on experience gained from the design, execution and performance of a number of offshore concrete structures around the world and in particular in the North Sea. Ongoing inspections have shown excellent durability and structural performance even in structures that have exceeded their design lives in conditions often characterized by extreme wave loads, freezing conditions, hurricane force winds and seismic actions. This forms the background for discussing the applicability of concrete structures for the Arctic regions. Although to a large extent dedicated to oil and gas related structures, the report is also relevant to other marine applications where the same design principles, material selection criteria and construction methods apply. fib Bulletin 50 is not in itself a code nor is it a textbook. Rather, extensive reference is made to proven and readily available design codes and construction guides as well as relevant papers and proceedings and other fib publications.

Office of Management and Budget,2001 **Budget of the United States Government, Fiscal Year 2002** United States Government Printing Office,United States. Office of Management and Budget,2001-04 **The Material Structure** Tan Kheng Yeang,2014-02-05 The conflict between the material side of human existence and that of our spiritual and philosophical beliefs is as old as humanity itselfbut one side of the equation is as important as the other and no society can hope to sustain its existence without an equitable balance between the two In this thoughtful and thought provoking volume the author offers a unique perspective on the system of concrete tangible products produced by humankind that form the physical foundation of society He calls this system the material structure However this book is not intended as a scientific study of the production distribution and consumption of goods that is the realm of economics rather it provides an overview of the totality of products created by humans for human consumption and assesses their role as a constituent of civilization

The subject of this study could also be designated as productology. The development and growth of the material structure have occurred in an inconsistent haphazard fashion. Advancements in science, medicine, and technology have contributed to the creation of a chaotic mass of unrelated products. Even the advent of mechanization has failed to yield any further insights into the conglomeration of products that form an integral part of today's world. This volume proposes to give unity to the material structure by classifying its components into divisions, determining the principles and rules that govern or should govern it, and relating it to the other constituents of civilization, including philosophy and religion, which throughout history have often been inimical to the material side of human existence. The author presents a cogent and persuasive argument that in order to survive, civilization needs one component as much as the other. The key is to achieve an equitable balance between these two dichotomies, something which to date no society has been capable of accomplishing. This book provides a fascinating and fresh approach to an age-old enigma that has plagued humankind since the dawn of our existence.

This book is about materials. The fundamental properties and technical aspects are reviewed within a context of a material's history, the theories of its meaning and making, and its use. Information about the sustainability aspects of each material is included as a critical necessity in construction. Innovative design comes from an understanding of materials for what they are, how they have been used in the past, and how they can support human activity. The author provides essential information to students and professionals concerned with advancing their design at a time when the consumption of natural resources and the consequences of wasteful practices are of urgent concern.
