

Mathematics Standards -Third Grade

Name: _____

Operations and Algebraic Thinking				
Represent and solve problems involving multiplication and division.				
1. Interpret products of whole numbers, e.g., interpret 5×7 as the total number of objects in 5 groups of 7 objects each. For example, describe a context in which a total number of objects can be represented as 5×7 .				
2. Interpret whole-number quotients of whole numbers, e.g., interpret $56 \div 8$ as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. For example, describe a context in which a number of shares or a number of groups can be represented as $56 \div 8$.				
3. Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.				
4. Determine the unknown whole number in a multiplication or division equation relating three whole numbers. For example, determine the unknown number that makes the equation true in each of the equations $8 \times ? = 48$, $5 = 3 \times ?$, $42 \div ? = 7$.				
Understand properties of multiplication and the relationship between multiplication and division.				
5. Apply properties of operations as strategies to multiply and divide. Examples: If $8 \times 5 = 40$ is known, then $5 \times 8 = 40$ is also known. (Commutative property of multiplication.) $3 \times 5 = 15$ can be found by $3 \times 5 = 15$, then $15 \div 3 = 5$, or by $5 \times 3 = 15$, then $5 \div 5 = 10 \div 2 = 5$. (Associative property of multiplication.) Knowing that $8 \times 5 = 40$ and $8 \times 2 = 16$, one can find 8×7 as $8 \times (5 + 2) = (8 \times 5) + (8 \times 2) = 40 + 16 = 56$. (Distributive property.)				
6. Understand division as an unknown-factor problem. For example, find $32 \div 8$ by finding the number that makes $8 \times ?$ when multiplied by 8.				
Multiply and divide within 100.				
7. Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.				
Solve problems involving the four operations, and identify and explain patterns in arithmetic.				
8. Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies (including rounding).				
9. Identify arithmetic patterns (including patterns in the addition table or multiplication table), and explain them using properties of operations. For example, observe that 4 times a number is always even, and explain why 4 times a number can be decomposed into two equal addends.				
Numbers and Operations in Base Ten				
Use place value understanding and properties of operations to perform multi-digit arithmetic.				
1. Use place value understanding to round whole numbers to the nearest 10 or 100.

Teaching Multiplication with Lesson Study Masami Isoda,Raimundo Olfo,2020-11-23 This open access book is intended to assist teachers teacher trainers curriculum designers editors and authors of textbooks in developing strategies to teach the multiplication of natural numbers based on the experience of the Lesson Study in Japan This approach to mathematics education dates back to the 1870s and reconciles the emphasis on problem solving with the treatment of the curricular contents It has gained international recognition since the 1990s and thanks to it mathematics education in Japan has been recognized as one of the most efficient and innovative in the world This growing international awareness has led to an effort to apply the principles of Lesson Study to other parts of the world and this book shows how experienced authors from Brazil Chile Mexico Spain and Portugal have worked to adapt some of these methods and techniques to the Portuguese and Spanish speaking countries of Ibero America Drawing on the impact of Lesson Study on government curriculum decisions and teacher behavior in Japanese classrooms offering examples of lessons lesson plans and suggestions for teaching and presenting examples of the good reception of the principles of Lesson Study in Ibero America Teaching Multiplication with Lesson Study Japanese and Ibero American Theories for Mathematics Education shows how an efficient and cutting edge experience in mathematics education can travel the world and help teachers in many different countries

Specially Designed Instruction for Special Education Rosemary Tralli,2024-06-01 A new resource for teacher preparatory programs at institutes of higher education and school based professional development Specially Designed Instruction for Special Education A Guide to Ensuring Quality IEP Implementation offers a detailed account of the legal requirements and evidence based practices for educators to afford quality specialized instruction to eligible students The latest entry in SLACK s Evidence Based Instruction in Special Education series Specially Designed Instruction for Special Education provides educators with practical tools to define plan implement and assess educational conditions and practices After reading this text special education teacher candidates and educators will possess the knowledge and skills to ensure student success through specially designed instruction align interventions with student strengths and needs and engage in collaborations to develop and implement quality Individualized Education Programs What s included in Specially Designed Instruction for Special Education Individuals with Disabilities Education Act connections with references to federal regulations and relevant court cases Evidence based practices and tools that support specialized instruction Key takeaways that summarize concepts and practices associated with the chapter content Included with the text are online supplemental materials for faculty use in the classroom Specially Designed Instruction for Special Education provides readers with a comprehensive understanding of the composition and conditions of specialized instruction and the tools to ensure their adherence to the legal and programming components of specialized instruction **High School Mathematics at Work**

National Research Council, Mathematical Sciences Education Board, 1998-06-27 Traditionally vocational mathematics and precollege mathematics have been separate in schools But the technological world in which today's students will work and live calls for increasing connection between mathematics and its applications Workplace based mathematics may be good mathematics for everyone High School Mathematics at Work illuminates the interplay between technical and academic mathematics This collection of thought provoking essays by mathematicians educators and other experts is enhanced with illustrative tasks from workplace and everyday contexts that suggest ways to strengthen high school mathematical education This important book addresses how to make mathematical education of all students meaningful how to meet the practical needs of students entering the work force after high school as well as the needs of students going on to postsecondary education The short readable essays frame basic issues provide background and suggest alternatives to the traditional separation between technical and academic mathematics They are accompanied by intriguing multipart problems that illustrate how deep mathematics functions in everyday settings from analysis of ambulance response times to energy utilization from buying a used car to rounding off to simplify problems The book addresses the role of standards in mathematics education discussing issues such as finding common ground between science and mathematics education standards improving the articulation from school to work and comparing SAT results across settings Experts discuss how to develop curricula so that students learn to solve problems they are likely to encounter in life while also providing them with approaches to unfamiliar problems The book also addresses how teachers can help prepare students for postsecondary education For teacher education the book explores the changing nature of pedagogy and new approaches to teacher development What kind of teaching will allow mathematics to be a guide rather than a gatekeeper to many career paths Essays discuss pedagogical implication in problem centered teaching the role of complex mathematical tasks in teacher education and the idea of making open ended tasks and the student work they elicit central to professional discourse High School Mathematics at Work presents thoughtful views from experts It identifies rich possibilities for teaching mathematics and preparing students for the technological challenges of the future This book will inform and inspire teachers teacher educators curriculum developers and others involved in improving mathematics education and the capabilities of tomorrow's work force
