Undergraduate Mathematics for the Life Sciences Glenn Ledder, Jenna P. Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement

and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see **Hands-On Math Projects with Real-Life Applications, Grades 3-5** Judith A. When Critical Multiculturalism Meets Mathematics Patricia L. Marshall, Jessica T. DeCuir-Gunby, Allison W. McCulloch, 2015-12-14 When Critical Multiculturalism Meets Mathematics details the development and outcomes of a teacher professional development project that merged multiculturalism and mathematics In six compact chapters the authors describe the impetus for their multi year project and present rich case studies of nine teacher participants The cases stand alone as compelling reading yet Marshall et al extend beyond their

distinctiveness to explain the statistical data related to the project's broader impact. Emphasizing both qualitative and quantitative findings makes this book ideal for novice researchers interested in mixed method study. Likewise the authors unveil the anatomy and a few complexities of conducting research in the real world contexts of schools including participant recruitment and resolution of unanticipated matters that can arise within research teams. A unique twist in the final chapter is Marshall et al's critique of their own missteps as researchers which are used skillfully and unobtrusively to proffer tips for future studies. They conclude by theorizing affirmed intersectionality identified as the critical element that facilitated teachers' recognition and acceptance of the compatibility between the study's two components.
