Making Data Visual Danyel Fisher,Miriah Meyer,2017-12-20 You have a mound of data sitting in front of you and a suite of computation tools at your disposal And yet you re stumped as to how to turn that data into insight Which part of that data actually matters and where is this insight hidden If you re a data scientist who struggles to navigate the murky space between data and insight this book will help you think about and reshape data for visual data exploration It s ideal for relatively new data scientists who may be computer knowledgeable and data knowledgeable but do not yet know how to create effective explorable representations of data With this book you ll learn Task analysis driven by a series of leading questions that draw out the important aspects of the data to be explored Visualization patterns each of which take a different perspective on data and answer different questions A taxonomy of visualizations for common data types Techniques for gathering design requirements When and where to make use of statistical methods

Foundations of Data Visualization Min Chen,Helwig Hauser,Penny Rheingans,Gerik Scheuermann,2020-08-11 This is the first book that focuses entirely on the fundamental questions in visualization Unlike other existing books in the field it

contains discussions that go far beyond individual visual representations and individual visualization algorithms. It offers a collection of investigative discourses that probe these questions from different perspectives including concepts that help frame these questions and their potential answers, mathematical methods that underpin the scientific reasoning of these questions, empirical methods that facilitate the validation and falsification of potential answers, and case studies that stimulate hypotheses about potential answers while providing practical evidence for such hypotheses. Readers are not instructed to follow a specific theory but their attention is brought to a broad range of schools of thoughts and different ways of investigating fundamental questions. As such, the book represents the by now most significant collective effort for gathering a large collection of discourses on the foundation of data visualization. Data visualization is a relatively young scientific discipline. Over the last three decades, a large collection of computer-supported visualization techniques have been developed, and the merits and benefits of using these techniques have been evidenced by numerous applications in practice. These technical advancements have given rise to the scientific curiosity about some fundamental questions such as why and how visualization works when it is useful or effective and when it is not, what are the primary factors affecting its usefulness and effectiveness, and so on. This book signifies timely and exciting opportunities to answer such fundamental questions by building on the wealth of knowledge and experience accumulated in developing and deploying visualization technology in practice.

Data Visualization Made Simple Kristen Sosulski, 2018-09-27. *Data Visualization Made Simple* is a practical guide to the fundamentals, strategies, and real-world cases for data visualization, an essential skill required in today's information-rich world. With foundations rooted in statistics, psychology, and computer science, data visualization offers practitioners in almost every field a coherent way to share findings from original research, big data, learning analytics, and more. In nine appealing chapters, the book examines the role of data graphics in decision-making, sharing information, sparking discussions, and inspiring future research. It scrutinizes data graphics, deliberates on the messages they convey, and looks at options for design, visualization, and includes cases and interviews to provide a contemporary view of how data graphics are used by professionals across industries. Both novices and seasoned designers in education, business, and other areas can use this book's effective linear process to develop data visualization literacy and promote exploratory, inquiry-based approaches to visualization problems.
