Mathematics for Social Justice Catherine A. Buell,Bonnie Shulman,2021-11-17 Mathematics instructors are always looking for ways to engage students in meaningful and authentic tasks that utilize mathematics At the same time it is crucial for a democratic society to have a citizenry who can critically discriminate between fake and reliable news reports involving numeracy and apply numerical literacy to local and global issues This book contains examples of topics linking math and social justice and addresses both goals There is a broad range of mathematics used including statistical methods modeling calculus and basic algebra The range of social issues is also diverse including racial injustice mass incarceration income inequality and environmental justice There are lesson plans appropriate in many contexts service learning courses quantitative literacy reasoning courses introductory courses and classes for math majors What makes this book unique and timely is that the most previous curricula linking math and social justice have been treated from a humanist perspective This book is written by mathematicians for mathematics students Admittedly it can be intimidating for instructors trained in quantitative methods to venture into the arena of social dilemmas

This volume provides encouragement support and a treasure trove of ideas to get you started The chapters in this book were originally published as a special issue of the journal PRIMUS Problems Resources and Issues in Mathematics Undergraduate Studies *Braille Literacy - Resources for Learning and Reading*, 2014 Companion Proceedings of 7th South Asia Design Research International Conference 2019 "Improving Professionalism and Reflective Thinking through Design Research" Brigida Intan Printina, Edwar, Fitriani A., Muhammad Ilyas, & Nisraeni, ... [et al.], 2024-03-31 It is an honor and privilege to welcome you to the 7th South East Asia Design Research International Conference The conference's theme Improving Professionalism and Reflective Thinking through Design Research invites us to reflect on the current educational challenges e.g. globalization and industrial revolution 4.0 and transform them into opportunities through design research It acknowledges the need to develop our professionalism so that we can proactively contribute to the advancement of educational science and praxis It challenges us to rethinking the design research as a method to make learning and teaching innovation possible but also as a paradigm in building our capacity for innovation Yogyakarta is an artsy and historical city which serves as a fitting cultural social political and economic milieu for the conference The tagline Jogja Istimewa itself shows how the city has special values to be explored and experienced and we encourage you to absorb the city's abundance The Kraton the cultural and political heart of the city Fort Vredeburg museum Malioboro road Dipowisata urban tourism to name a few The perfect ambience of Yogyakarta will provide us with a convenient space to interact and exchange ideas with colleagues as a means of professional learning Our goal is for you to get new ideas tools and materials from the conference which will contribute to your professional development The variety of sessions workshops and social events will give you opportunities to connect with friends and colleagues to expand your networks We are excited about the keynote and invited speakers We believe they will share challenging and innovative ideas about education This conference is the result of the hard work support and dedication of a number of parties We wish to thank all the committee members who together make the conference possible The committee has been working throughout the year to propose sessions review a record number of submissions answer queries arrange the schedule and response to last minute requests We also want to thank Sanata Dharma University Ministry of Research Technology and Higher Education of Indonesia Sogang University and SEAMEO QITEP in Mathematics for their contribution to funding the conference *Associations between Reading and Mathematics: Genetic, Brain Imaging, Cognitive and Educational Perspectives* Sarit Ashkenazi, Orly Rubinsten, Bert De Smedt, 2017-10-05 Converging evidence demonstrates a strong link between reading and mathematics multiple cognitive processes are shared between reading and mathematics including the representation and retrieval of symbolic information attention working memory and cognitive control Additionally multiple brain networks are involved in both math and reading and last common genetic factors might influence both reading and math Hence it comes as no surprise that there are meaningful associations between aspects of math and reading abilities Moreover comorbidity rates between math learning disabilities MD and

reading disabilities RD are high up to 66% and prevalence rate of the comorbid condition is reported to be more common than the prevalence rate of isolated math learning disabilities Accordingly the goal of the research topic is to explore the underline mechanisms of this overlap between reading and math The research topic aims to include the following topics Genetics it has been found that both RD and MD are based on genetic factors and run in families Moreover math problem solving shares significant genetic overlap with general cognitive ability and reading decoding whereas math fluency shares significant genetic overlap with reading fluency and general cognitive ability Hence this topic will explore the shared and unique genetic risk factors to RD and MD In addition to shared and unique genetic influence on reading and math Neural perspective converging evidence from both structural and multiple functional imaging studies involving a wide range of numerical tasks points to the intraparietal sulcus IPS as a core region that involve in quantity manipulation However several additional brain areas such as frontoparietal and temporoparietal areas were found to be involved in numerical tasks Individuals with MD show deficits in a distributed set of brain regions that include the IPS fusiform gyrus in posterior brain regions and pre frontal cortex regions Similarly converging evidence indicate that the left hemisphere regions centered in the fusiform gyrus temporoparietal cortex and pre frontal cortex regions are strongly involve in typical reading and present lower activity connectivity or abnormal structure in RD Thus there is a meaningful neural overlap between reading and math Hence the authors can submit empirical studies on the role of several of brain regions that are involved in math and reading commonality and diversity both in the typical and a typical development Cognitive factors that play role in mathematics and reading and comorbidity between RD and MD There is a long lasting debate whether MD and RD originate from unique cognitive mechanisms or not Multiple cognitive processes are shared between reading and mathematics Therefore impairments in any one of domain general skills could conceivably play an important role in both pure and comorbid conditions Moreover it has been suggested that phonological processing has a significant role in some aspects of numerical processing such as retrieval of arithmetical facts Education it will be interesting to look at the effect of interventions that aim to improve reading such as phonological awareness and there transfer effect on improving mathematical processing Alternatively it will be good to test whether math interventions will improve reading
