Dodgson (Lewis Carroll)* Robin Wilson, Amirouche Moktefi, 2019-02-14 Charles Lutwidge Dodgson is best known for his Alice books Alice's Adventures in Wonderland and Through the Looking Glass written under his pen name of Lewis Carroll Yet whilst lauded for his work in children's fiction and his pioneering work in the world of Victorian photography his everyday job was a lecturer in Mathematics at Christ Church Oxford University The Mathematical World of Charles L. Dodgson Lewis Carroll explores the academic background behind this complex individual outlining his mathematical life describing his writings in geometry algebra logic the theory of voting and recreational mathematics before going on to discuss his mathematical legacy This is the first academic work that collects the research on Dodgson's wide ranging mathematical achievements into a single practical volume Much material appears here for the first time such as Dodgson's personal letters and drawings as well as

the results of recent investigations into the life and work of Dodgson Complementing this are many illustrations both historical and explanatory as well as a full mathematical bibliography of Dodgson's mathematical publications

Using Assessment To Reshape Mathematics Teaching Sandra K. Wilcox, Perry E. Lanier, 2000-04 Casebook video on the use of assessment as an ongoing activity in the classroom to help teachers reshape their instructional practice

Learning to Solve Complex Scientific Problems David H. Jonassen, 2017-09-25 Problem solving is implicit in the very nature of all science and virtually all scientists are hired, retained and rewarded for solving problems. Although the need for skilled problem solvers has never been greater, there is a growing disconnect between the need for problem solvers and the educational capacity to prepare them. Learning to Solve Complex Scientific Problems is an immensely useful read offering the insights of cognitive scientists, engineers and science educators who explain methods for helping students solve the complexities of everyday scientific problems. Important features of this volume include discussions on how problems are represented by the problem solvers and how perception, attention, memory and various forms of reasoning impact the management of information and the search for solutions; how academics have applied lessons from cognitive science to better prepare students to solve complex scientific problems; gender issues in science and engineering classrooms and questions to guide future problem solving research. The innovative methods explored in this practical volume will be of significant value to science and engineering educators and researchers as well as to instructional designers
