Equations and Inequalities Jiri Herman, Radan Kucera, Jaromir Simsa, 2000-03-23 A look at solving problems in three areas of classical elementary mathematics: equations and systems of equations of various kinds, algebraic inequalities and elementary number theory in particular, divisibility and Diophantine equations. In each topic, brief theoretical discussions are followed by carefully worked out examples of increasing difficulty and by exercises which range from routine to rather more challenging problems. While it emphasizes some methods that are not usually covered in beginning university courses, the book nevertheless teaches techniques and skills which are useful beyond the specific topics covered here. With approximately 330 examples and 760 exercises.

Why Math Must Replace Science Mike Hockney, 2014-11-03 The greatest catastrophe in intellectual history was to regard physics as real and mathematics as an unreal abstraction. In fact, mathematics is noumenal, true reality, and physics is phenomenal, illusory reality. Mathematics tells you what things are in themselves, and physics tells you how they appear to us. Mathematics is the perfect ground of existence defined by the God Equation. It is the source of causation, determinism, and objective reality, all of the things now formally denied by physics, which claims that observable reality is indeterministically born of unreal potentiality, wavefunctions. It is time to replace the scientific method with the mathematical method. It is time to recognize that true reality is intelligible, not sensible, noumenal, not phenomenal, unobservable, not observable, metaphysical, not physical, hidden, not manifest, rationalist, not empiricist, necessary, not contingent. Don't follow the crowd. Think for yourself.

Philosophy & Fun of Algebra Everest Boole, 2019-09-04 Arithmetic means dealing logically with facts which we know about questions of number. Logically, that is to say in accordance with the Logos or hidden wisdom, i.e. the laws of normal action of the human mind. For instance, you are asked what will have to be paid for six pounds of sugar at 3d a pound. You multiply the six by the three. That is not because of any property of sugar or of the copper of which the pennies are made. You would have done the same if the thing bought had been starch or apples. You would have done just the same if the material had been tea at 3s a pound. Moreover, you would have done just the same kind of action if you had been asked the price of seven pounds of tea at 2s a pound. You do what you do under direction of the Logos or hidden wisdom. And this law of the Logos is made not by any King or Parliament but by whoever or whatever created the human mind. Suppose that any Parliament passed an act that all the children in the kingdom were to divide the price by the number of pounds the Parliament could not make the answer come right. The only result of a foolish Act of Parliament like that would be that everybody's sums would come wrong and everybody's accounts be in confusion and everybody would wonder why the trade of the country was going to the bad.
