Miroslav Pavlović, 2019-08-19 This revised and extended edition of a well established monograph in function theory contains a study on various function classes on the disc a number of new results and new or easy proofs of old but interesting theorems for example the Fefferman Stein theorem on subharmonic behavior or the theorem on conjugate functions in Bergman spaces and a full discussion on  $g$  functions. **Aggregation Functions in Theory and in Practice** Vicenç

Torra, Radko Mesiar, Bernard De Baets, 2017-05-17 This book collects the abstracts of the contributions presented at AGOP 2017 the 9th International Summer School on Aggregation Operators. The conference took place in Skövde Sweden in June 2017. Contributions include works from theory and fundamentals of aggregation functions to their use in applications. Aggregation functions are usually defined as those functions that are monotonic and that satisfy the unanimity condition. In particular settings these conditions are relaxed. Aggregation functions are used for data fusion and decision making. Examples of these functions include means  $t$  norms and  $t$  conorms copulas and fuzzy integrals e.g. the Choquet and Sugeno integrals.

**Modular System Design and Evaluation** Mark Sh. Levin, 2014-09-06 This book examines seven key combinatorial engineering frameworks composite schemes consisting of algorithms and/or interactive procedures for hierarchical modular composite systems. These frameworks are based on combinatorial optimization problems e.g. knapsack problem multiple choice problem assignment problem morphological clique problem with the author's version of morphological design approach Hierarchical Morphological Multicriteria Design HMMD providing a conceptual lens with which to elucidate the

examples discussed This approach is based on ordinal estimates of design alternatives for systems parts components however the book also puts forward an original version of HMMD that is based on new interval multiset estimates for the design alternatives with special attention paid to the aggregation of modular solutions system versions The second part of Modular System Design and Evaluation provides ten information technology case studies that enriches understanding of the design of system design detection of system bottlenecks and system improvement amongst others The book is intended for researchers and scientists students and practitioners in many domains of information technology and engineering The book is also designed to be used as a text for courses in system design systems engineering and life cycle engineering at the level of undergraduate level graduate PhD levels and for continuing education The material and methods contained in this book were used over four years in Moscow Institute of Physics and Technology State University in the author s faculty course System Design

Informatics in Higher Education Fred Mulder,2016-01-09 This book addresses two main themes The first is the discipline of informatics Two major questions will be discussed how can we obtain and keep track of a systematic and objective overview of the vast landscape in higher informatics education both nationally and internationally and would it be useful to rationalize and redesign the informatics curricula leading to less fragmentation and more communality The second theme is the relation between informatics and other disciplines with the following main questions what informatics do we need to offer a coherent curriculum which suits the needs of the actual information society with respect to specific disciplines what is relevant in informatics and CIT to provide to others and what informatics concepts methods and techniques form the hard core needed in every other discipline

*The origin, function and diagnostic potential of extracellular microRNA in human body fluids* Andrey Turchinovich,William Cho,2014-07-28 Short non coding RNA molecules microRNAs miRNAs post transcriptionally regulate gene expression in living cells In recent years miRNAs have been found in a wide spectrum of mammalian body fluids including blood plasma saliva urine milk seminal plasma tears and amniotic fluid as extracellular circulating nuclease resistant entities The changes in miRNA spectra observed in certain fluids correlated with various pathological conditions suggesting that extracellular miRNAs can serve as informative biomarkers for certain diseases including cancer However the mechanism of generation and a biological role of

extracellular miRNAs remain unclear The current theories regarding extracellular miRNA origin and function suggest that these miRNAs can be either non specific by products of cellular activity and cell death or specifically released cell cell signaling messengers The goal of this Research Topic is to bring together up to date knowledge about the extracellular miRNA and its role in disease diagnostics and possibly inter cellular communication
