Information Dynamics Information Dynamics:

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem's work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

Guided Self-Organization: Inception Mikhail Prokopenko, 2013-12-19 Is it possible to guide the process of self organisation towards specific patterns and outcomes Wouldn't this be self contradictory After all a self organising process assumes a transition into a more

organised form or towards a more structured functionality in the absence of centralised control Then how can we place the guiding elements so that they do not override rich choices potentially discoverable by an uncontrolled process This book presents different approaches to resolving this paradox In doing so the presented studies address a broad range of phenomena ranging from autopoietic systems to morphological computation and from small world networks to information cascades in swarms A large variety of methods is employed from spontaneous symmetry breaking to information dynamics to evolutionary algorithms creating a rich spectrum reflecting this emerging field Demonstrating several foundational theories and frameworks as well as innovative practical implementations Guided Self Organisation Inception will be an invaluable tool for advanced students and researchers in a multiplicity of fields across computer science physics and biology including information theory robotics dynamical systems graph theory artificial life multi agent systems theory of computation and machine learning

Relational, Networked and Collaborative Approaches to Public Diplomacy R.S. Zaharna, Amelia Arsenault, Ali Fisher, 2014-02-05 Over the past decade scholars practitioners and leading diplomats have forcefully argued for the need to move beyond one way mass media driven campaigns and develop more relational strategies In the coming years as the range of public diplomacy actors grows the issues become more complexly intertwined and the use of social media proliferates the focus on relations will intensify along with the demands for more sophisticated strategies These changes in the international arena call for a connective mindshift a shift from information control and dominance to skilled relationship management Leading international scholars and practitioners embark on a forward looking exploration of creative conceptual frameworks training methods and case studies that advance relational networking and collaborative strategies in public diplomacy Light on academic jargon and rich in analysis this volume argues that while relationships have always been pivotal to the practice of public diplomacy the relational dynamics are changing Rather than focus on specific definitions the contributors focus on the dynamic interplay of influence in the public diplomacy environment That environment includes state and non state actors public and private partners competitors and collaborators new and old media and is conditioned by power ethics and cultures This book is an essential resource to students and practitioners interested on how to build relationships and transform them into more elaborate network

structures through public communication It will challenge you to push the boundaries of what you think are the mechanisms benefits and potential issues raised by a relational approach to public diplomacy

Cooperation and Its Evolution Kim Sterelny, Richard Joyce, Brett Calcott, Ben Fraser, 2024-08-06 Essays from a range of disciplinary perspectives show the central role that cooperation plays in structuring our world This collection reports on the latest research on an increasingly pivotal issue for evolutionary biology cooperation The chapters are written from a variety of disciplinary perspectives and utilize research tools that range from empirical survey to conceptual modeling reflecting the rich diversity of work in the field They explore a wide taxonomic range concentrating on bacteria social insects and especially humans Part I Agents and Environments investigates the connections of social cooperation in social organizations to the conditions that make cooperation profitable and stable focusing on the interactions of agent population and environment Part II Agents and Mechanisms focuses on how proximate mechanisms emerge and operate in the evolutionary process and how they shape evolutionary trajectories Throughout the book certain themes emerge that demonstrate the ubiquity of questions regarding cooperation in evolutionary biology the generation and division of the profits of cooperation transitions in individuality levels of selection from gene to organism and the human cooperation explosion that makes our own social behavior particularly puzzling from an evolutionary perspective Bradford Books imprint

Quantum Probability and Randomness Andrei Khrennikov, Karl Svozil, 2019-04-18 The last few years have been characterized by a tremendous development of quantum information and probability and their applications including quantum computing quantum cryptography and quantum random generators In spite of the successful development of quantum technology its foundational basis is still not concrete and contains a few sandy and shaky slices Quantum random generators are one of the most promising outputs of the recent quantum information revolution Therefore it is very important to reconsider the foundational basis of this project starting with the notion of irreducible quantum randomness Quantum probabilities present a powerful tool to model uncertainty Interpretations of quantum probability and foundational meaning of its basic tools starting with the Born rule are among the topics which will be covered by this issue Recently quantum probability has started to play an important role in a few areas of research outside quantum physics in particular quantum probabilistic treatment of problems of theory of decision making under uncertainty Such studies are also among the topics of this issue

Computing Nature Gordana Dodig-Crnkovic, Raffaella Giovagnoli, 2013-03-21 This book is about nature considered as the totality of physical existence the universe and our present day attempts to understand it If we see the universe as a network of networks of computational processes at many different levels of organization what can we learn about physics biology cognition social systems and ecology expressed through interacting networks of elementary particles atoms molecules cells and especially neurons when it comes to understanding of cognition and intelligence organs organisms and their ecologies Regarding our computational models of natural phenomena Feynman famously wondered Why should it take an infinite amount of logic to figure out what

one tiny piece of space time is going to do Phenomena themselves occur so quickly and automatically in nature Can we learn how to harness nature s computational power as we harness its energy and materials This volume includes a selection of contributions from the Symposium on Natural Computing Unconventional Computing and Its Philosophical Significance organized during the AISB IACAP World Congress 2012 held in Birmingham UK on July 2 6 on the occasion of the centenary of Alan Turing s birth In this book leading researchers investigated questions of computing nature by exploring various facets of computation as we find it in nature relationships between different levels of computation cognition with learning and intelligence mathematical background relationships to classical Turing computation and Turing s ideas about computing nature unorganized machines and morphogenesis It addresses questions of information representation and computation interaction as communication concurrency and agent models in short this book presents natural computing and unconventional computing as extension of the idea of computation as symbolmanipulation
