Inmarsat System Definition Manual:

Satellite Communication Systems Design S. Tirró, 2012-12-06 Writing a comprehensive book on satellite communications requires the command of many technical disciplines and the availability of up to date information on international recommendations system architectures and equipment standards It is therefore necessary to involve many authors each possessing a good level of knowledge in a particular discipline The problem of using a coherent and unambiguous set of definitions and basic terms has been solved by including in the book all the background information needed for understanding satellite communication systems without any major reference to other textbooks specializing in particular disciplines The obvious consequence of this approach has been the large size of the book with the advantages however of practically complete independence from other books more systematic discussion of the subject matter and better readability After the required background information emphasis has been placed on the discussion of techniques and system design criteria rather than on specific equipment implementation or description of particular systems The book may be divided in five parts as follows The first five chapters provide most of the required background information Chapter 6 is an introductory outline of satellite communication systems Chapters 7 to 13 deal with the various aspects of technical system design Chapter 14 discusses system economics Chapter 15 provides a brief insight into some foreseeable future developments of satellite communications

Aeronautical Public Correspondence by Satellite Tare Brisibe, 2006 This book covers the evolution of satellite based Aeronautical Public Correspondence and the operational environment in which services are being offered Followed by an examination of applicable rules including the relevant institutions from which they emanate attention is devoted to the effect of State Sovereignty applicable in jurisdictions such as territorial airspace the Arctic Antarctica and the High Seas as well as to activities such as telecommunications air transport copyright protection and trade in services Particular attention is given to the ITU Radio Regulations ITU Sector Recommendations ICAO Council Resolutions International Copyright Laws National Operational Procedures and Statutes A presentation of the relevant Laws and Regulations currently in force is made while the subject of Liability is analysed against the backdrop of Case Law and legal instruments in the context of both Public and Private International Law Looking to the future the volume discusses the influence of Convergence and the need for more appropriate Regulations It concludes with a Draft Agreement on the Use of Aircraft Earth Stations for Non Safety Purposes
