In software engineering, documentation refers to all written papers and resources related to the creation and usage of a software product. All software-related products, either generated by a small group or a huge organization, require some level of documentation. Various sorts of documents are developed during the entire software development lifecycle (SDLC). Documentation exists to clarify product functionality, consolidate project-related information, and enable stakeholders and developers to discuss any important questions that may arise.

Furthermore, documentation inaccuracies can cause gaps between stakeholders' and engineers' ideas, resulting in a suggested solution that fails to fulfill stakeholder expectations. As a result, managers should place a high priority on documentation quality.

Software instruction material refers to any documentation created to help users or developers understand the capabilities and functions of a piece of software. This type of technical documentation comprises textual instructions, videos, user guides, and instruction manuals that attempt to assist users in comprehending the features, activities, and functionality of a piece of software.

Software documentation is designed for two types of audiences: software engineers and end users. Documentation in the field of software engineering encompasses knowledge and publications that help experts understand the planning, development, and implementation of products. This documentation helps engineers understand, update, and modify software from the bottom up.

Software documentation outlines what software developers did when creating the product and what IT professionals and customers must do to install and use it. Manuals are typically incorporated into the software's user interface and are also
