

# **Guidelines for Single Laboratory Validation (SLV) of Chemical Methods for Metals in Food**

## **Introduction**

The application of analytical methods within a regulatory analysis or accredited laboratory framework imposes certain requirements on both the analyst and laboratory. Under ISO-17025, accredited laboratories are expected to demonstrate both “fitness for purpose” of the methods for which they are accredited and competency of their assigned analysts in performance of the methods<sup>1</sup>. The Codex Alimentarius Commission has issued a general guideline for analytical laboratories involved in the import and export testing of foods which contains four principles<sup>2</sup>:

- Such laboratories should demonstrate internal quality control procedures which meet the requirements of the Harmonised Guidelines for Internal Quality Control in Analytical Chemistry<sup>3</sup>;
- Such laboratories should be regular participants in appropriate proficiency testing schemes which have been designed and conducted as per the requirements of the International Harmonized Protocol for Proficiency Testing of (Chemical) Analytical Laboratories<sup>4</sup>;
- Such laboratories should become accredited for tests routinely performed according to ISO/IEC-17025:1999 General requirements for the competence of calibration and testing laboratories (now ISO/IEC-17025<sup>1</sup>); and
- Such laboratories should use methods which have been validated according to the principles laid down by the Codex Alimentarius Commission whenever such methods are available.

General requirements for validation of analytical methods according to principles laid down by the Codex Alimentarius Commission are provided in the Codex Manual of Procedures, including provision for “single laboratory” validation of analytical methods<sup>5</sup>. However, there remains considerable misunderstanding among analysts as to precisely what is meant and what is required to demonstrate “method validation”. Additional guidance for possible future inclusion in the Manual of Procedures is currently under discussion in the Codex Committee on Methods

*Nutraceutical and Functional Food Regulations in the United States and Around the World* Debasis Bagchi, 2008-07-18 Globalization of the nutraceutical and functional food industries presents significant challenges not the least of which is the regulatory variance between countries active in the marketplace Nutraceutical and Functional Food Regulations in the United States and Around the World has been written by eminent experts in the field with the specific intention of addressing these important considerations Beginning with insights into the scope importance and growing opportunities in these industries the book demonstrates the global scenario on the acceptance and demand for nutraceuticals and functional foods It explores the regulatory hurdles and claim substantiation of these foods and dietary supplements as well as the intricate aspects of manufacturing procedures Including regulations from South America Canada European Union Australia New Zealand Africa Japan Korea China India and Southeast Asia as well as the United States Nutraceutical and Functional Food Regulations in the United States and Around the World provides a valuable resource for understanding the key considerations of operating in this rapidly expanding area Overview of nutraceutical and functional food regulations around the world Discusses the important of GRAS status and DSHEA regulations Provides insight on quality manufacturing techniques cGMP and standardized analytical techniques Includes salient features on overcoming regulatory hurdles Addresses the importance of safety efficacy and human clinical studies for worldwide acceptance Highlights anti terrorism safety assurance through traceability Explores the significance of intellectual property trademark and branding on marketing

**Chemical Analysis of Antibiotic Residues in Food** Jian Wang, James D. MacNeil, Jack F. Kay, 2011-11-29 An insightful exploration of the key aspects concerning the chemical analysis of antibiotic residues in food The presence of excess residues from frequent antibiotic use in animals is not only illegal but can pose serious health risks by contaminating products for human consumption such as meat and milk Chemical Analysis of Antibiotic Residues in Food is a single source reference for readers interested in the development of analytical methods for analyzing antibiotic residues in food It covers themes that include quality assurance and quality control antibiotic chemical properties pharmacokinetics

metabolism distribution food safety regulations and chemical analysis In addition the material presented includes background information valuable for understanding the choice of marker residue and target animal tissue to use for regulatory analysis This comprehensive reference Includes topics on general issues related to screening and confirmatory methods Presents updated information on food safety regulation based on routine screening and confirmatory methods especially LC MS Provides general guidance for method development validation and estimation of measurement uncertainty Chemical Analysis of Antibiotic Residues in Food is written and organized with a balance between practical use and theory to provide laboratories with a solid and reliable reference on antibiotic residue analysis Thorough coverage elicits the latest scientific findings to assist the ongoing efforts toward refining analytical methods for producing safe foods of animal origin

*Analysis of Food Toxins and Toxicants, 2 Volume Set* Yiu-Chung Wong, Richard J. Lewis, Sr., 2017-09-25 Analysis of Food Toxins and Toxicants consists of five sections providing up to date descriptions of the analytical approaches used to detect a range of food toxins Part I reviews the recent developments in analytical technology including sample pre treatment and food additives Part II covers the novel analysis of microbial and plant toxins including plant pyrrolizidine alkaloids Part III focuses on marine toxins in fish and shellfish Part IV discusses biogenic amines and common food toxicants such as pesticides and heavy metals Part V summarizes quality assurance and the recent developments in regulatory limits for toxins toxicants and allergens including discussions on laboratory accreditation and reference materials Chemical Analysis of

Non-antimicrobial Veterinary Drug Residues in Food Jack F. Kay, James D. MacNeil, Jian Wang, 2016-11-21 Provides a single source reference for readers interested in the development of analytical methods for analyzing non antimicrobial veterinary drug residues in food Provides a comprehensive set of information in the area of consumer food safety and international trade Covers general issues related to analytical quality control and quality assurance measurement uncertainty screening and confirmatory methods Details many techniques including nanotechnology and aptamer based assays covering current and potential applications for non antimicrobial veterinary drugs Provides guidance for analysis of banned drugs including natural and synthetic steroids Resorcylic acid lactones and Beta agonists **Harmful Algal Blooms** Sandra E.
