intervention on portion estimation The primary outcomes of interest included estimation of real foods and food models and accuracy of energy intake using a 24 hour dietary recall and two food records Secondary outcomes included self efficacy knowledge of portion size information and social desirability Repeated measures MANOVA were used to examine changes in portion estimation skills and accuracy of energy intake between baseline and post intervention and as a function of the intervention A convenience sample of 76 women was recruited interviewed at baseline randomly assigned to one of three conditions and then assessed two weeks post intervention The baseline and post intervention interviews consisted of a survey real and plastic food model portion size tests one 24 hour dietary recall two days of food records and assessment of height and weight Participants assigned to the intervention conditions group or computer based received one hour of training Results indicated that the intervention was not effective in improving real food portion size estimation abilities Women were observed making greater estimation errors at post intervention compared with baseline Estimation errors were greater with amorphous foods compared with solids and liquids The intervention was effective in improving estimation errors on the food model test improving self efficacy and advancing knowledge of portion size information Accuracy of energy intake did not improve between baseline and post intervention or as a function of the intervention However social desirability was found to be associated with energy intake In addition the number of low energy reporters decreased between baseline and post intervention among participants in the group condition Nevertheless the prevalence of low energy reporting in this sample was very high Further research is needed to develop easily transportable interventions that will improve accuracy of energy reporting and portion estimation skills Interventions delivered by computer may need to be designed to provide more opportunities for multiple sensory interactions
