Inflammatory Bowel Disease Experience And Controversy:

Inflammatory Bowel Disease B.I. Korelitz, 2012-12-06 Grouping ulcerative colitis with Crohn's disease Inflammatory Bowel Disease in a teaching seminar has historical support The medical literature includes descriptions of both diseases in the latter half of the 19th century they share many symptoms in some instances differentiating them may be very difficult and the cause of each remains unknown Furthermore one member of a family may suffer with Crohn's disease while another has ulcerative colitis And both processes are prone to the late complications of carcinoma at a site of previous involvement Finally the investigators and students of one disease have usually also contributed to the understanding of the other disease The incidence of Crohn's disease seems to be increasing rapidly This has been suggested by reports from Sweden the Netherlands England Scotland and South Africa as well as the United States Though methods of recording data vary the increase is further supported by cases of greater virulence still younger ages of onset and more cases in the elderly This is remarkable when we consider that fifty years ago when the classic description from Mt Sinai Hospital was being prepared the disease was rare Since the cause remains elusive we must try to cope with this entity as skillfully as we can with consideration of indications and timing of drug and surgical intervention The choice of forms of management has been controversial even among the most experienced physicians

Trends and Controversies in IBD: Evidence-Based Approach Or Individual Management? A. Dignass, H. Lochs, E.-F. Stange, 2004-04-30 In spite of significant scientific progress in recent years the aetiopathogenesis of chronic inflammatory bowel diseases IBD remains elusive With a prevalence of 1 700 to 1 500 in central Europe both diseases are not rare However most physicians will generally treat only a few patients with IBD in their clinical practice Because of this limited experience and the variety of clinical IBD manifestations IBD patients are frequently treated in specialized tertiary care centres Nevertheless IBD patients will also consult less specialized general practitioners who will not be able to focus extensively on the management of IBD patients due to time constraints Physicians who take care of IBD patients have to select among an ever increasing amount of new scientific information in order to provide optimal and up to date care to their patients In the era of evidence based medicine it is often under debate whether evidence based medicine may really improve the management of IBD patients or whether the diversity and complexity of IBD needs an individual and patient oriented approach This book the proceedings of the Falk Symposium 134 on Trends and Controversies in IBD Evidence Based Approach or Individual Management held in Berlin Germany on 12-13 June 2003 critically discusses established and emerging new concepts in the field of IBD It critically analyzes evidence based and individual approaches in the management of IBD and discusses these approaches with the help of selected case reports

Inflammatory Bowel Disease Burton I. Korelitz, 1982 Inflammatory Bowel Disease L.R. Sutherland, S.M. Collins, F. Martin, R.S. McLeod, Stephan R. surgeons International symposia are common and it is safe to say that there is at least one major symposium held somewhere in the world each year This book encompasses the proceedings of two recent symposia held in Victoria British Columbia Canada The symposia were the fifth and sixth international meetings focused on inflammatory bowel disease in Canada in the last eight years Once again they were sponsored by Axcan Pharma Inc formerly Interfalk Canada Inc and endorsed by the Canadian Association of Gastroenterology As has become traditional at such meetings the faculty was drawn from an international roster of leaders in the field of inflammatory bowel disease and gastroenterology The chapters of the proceedings provide a timely up to date review of the major issues including those within the realm of basic science and others dealing with clinical problems The first symposium Basic Research and Clinical Implications was co ordinated by John Wallace in association with Stephen Collins and Stephan Targan The themes of this section were organized under the general topics of predisposing factors genetics animal models infection permeability and immune deficits and the pathophysiology of intestinal inflammation The second symposium Trends in Therapy was organized by Lloyd Sutherland along with Francois Martin Robin McLeod and Noel Williams

Modern Concepts in Gastroenterology Alan B.R. Thomson, L.R. DaCosta, William C. Watson, 2012-12-06 A fine team of state of the art researcher clinicians who know their fields have contributed to the advancement of knowledge and are in a position to judge what is truly important have here pooled their thoughts in a series of chapters on the cutting edges of gastroenterology Four attributes render this volume superior to other update oriented publications The first striking feature which is immediately evident upon scanning the table of contents is the imaginative choice of subjects ranging from traveler's diarrhea and sexually transmitted GI infections through TPN and interventional endoscopy to geriatrics and iatrogenic disease A second outstanding feature of this volume is its success in balancing basic pathophysiology with practical considerations of clinical management This is achieved in the discussions of such diverse topics as acid peptic diseases infectious and other diarrheal syndromes and hepatitis immunization Throughout the book we are led smoothly from basic science principles to specific recommendations for diagnosis and therapy This practical emphasis appears repeatedly and sometimes produces a delightful surprise such as a chapter on radiology that is not technology based but instead problem oriented

Immunosuppression in Inflammatory Bowel Diseases K. Fellermann, D.P. Jewell, W.J. Sandborn, J. Schölmerich, E.-F. Stange, 2001-06-30 The aetiology of the chronic inflammatory bowel diseases Crohn s disease and ulcerative colitis is still enigmatic The therapeutic approach has therefore traditionally focused on anti inflammatory principles including corticosteroids and aminosalicylates Since a significant proportion of patients is steroid dependent or refractory and because of the problematic side effects of long term systemic steroids active immunosuppression has gained acceptance in the field The classical immunosuppressants azathioprine and 6 mercaptopurine have long been evidence based in IBD but underused Recently methotrexate and cyclosporine have also been proven to be effective in certain situations Newer drugs like tacrolimus mycophenolate and others may be similarly useful but their potential is still unclear Finally the immune modifiers including IL 10 and TNF antibodies have been successfully subjected to controlled trials Other experimental drugs discussed in this book are on the horizon This volume is the Proceedings of Falk Symposium 119 held in Freiburg im Breisgau Germany October 3 4 2000 and covers systematically the field of immunosuppression in inflammatory bowel diseases It is hoped that it will further the prudent use of these drugs in the proper clinical situations by increasing our understanding of both the mechanisms of action and the clinical benefit to the patient
Controversies in Laparoscopic Surgery Ahmad Assalia, Michel Gagner, Moshe Schein, 2006-02-08 There are numerous textbooks detailing almost every aspect of the different laparoscopic procedures However in this era of evidence based medicine a text focusing on the controversies from the laparoscopic as well as the general surgeon s point of view is missing This book is not intended to be yet another textbook of laparoscopy instead its main purpose is to address unsettled issues of controversy This will significantly enhance evidence based knowledge of this developing field stimulate thinking and discussions in rounds and meetings assist surgeons in their decision making and stimulate further research This book is not aimed only at laparoscopic

surgeons with their steadily increasing number but also at general surgeons and surgical trainees It will define and sharpen points of controversy by internationally recognized authors and thus provide state of the art quality to each topic
