Fitch,Steven J. Bernstein,Maria Delores Aguilar,Mary S. Aguilar,Bernard Burnand,Pablo Lazaro,Juan Ramon LaCalle,2001
Health systems should function in such a way that the amount of inappropriate care is minimized while at the same time
stinting as little as possible on appropriate and necessary care The ability to determine and identify which care is overused
and which is underused is essential to this functioning To this end the RAND UCLA Appropriateness Method was developed
in the 1980s It has been further developed and refined in North America and increasingly in Europe The rationale behind the
method is that randomized clinical trials the gold standard for evidence based medicine are generally either not available or
cannot provide evidence at a level of detail sufficient to apply to the wide range of patients seen in everyday clinical practice
Although robust scientific evidence about the benefits of many procedures is lacking physicians must nonetheless make
decisions every day about when to use them Consequently a method was developed that combined the best available
scientific evidence with the collective judgment of experts to yield a statement regarding the appropriateness of performing a
procedure at the level of patient specific symptoms medical history and test results This manual presents step by step
guidelines for conceptualising designing and carrying out a study of the appropriateness of medical or surgical procedures
for either diagnosis or treatment using the RAND UCLA Appropriateness Method The manual distills the experience of many
researchers in North America and Europe and presents current as of the year 2000 thinking on the subject Although the
manual is self contained and complete the authors do not recommend that those unfamiliar with the RAND UCLA
Appropriateness Method independently conduct an appropriateness study instead they suggest seeing one before doing one
