Interactive Macroeconomics Corrado Di Guilmi, Mauro Gallegati, Simone Landini, 2017-04-04 One of the major problems of macroeconomic theory is the way in which the people exchange goods in decentralized market economies There are major disagreements among macroeconomists regarding tools to influence required outcomes Since the mainstream efficient market theory fails to provide an internal coherent framework there is a need for an alternative theory The book provides an innovative approach for the analysis of agent based models populated by the heterogeneous and interacting agents in the field of financial fragility The text is divided in two parts the first presents analytical developments of stochastic aggregation and macro dynamics inference methods The second part introduces macroeconomic models of financial fragility for complex systems populated by heterogeneous and interacting agents The

Computable Foundations for Economics K. Vela Velupillai, 2012-07-26 *Computable Foundations for Economics* is a unified collection of essays some of which are published here for the first time and all of which have been updated for this book on an approach to economic theory from the point of view of algorithmic mathematics By algorithmic mathematics the author means computability theory and constructive mathematics This is in contrast to orthodox mathematical economics and game theory which are formalised with the mathematics of real analysis underpinned by what is called the ZFC formalism i e set theory with the axiom of choice This reliance on ordinary real analysis and the ZFC system makes economic theory in its current mathematical mode completely non algorithmic which means it is numerically meaningless The book provides a systematic attempt to dissect and expose the non algorithmic content of orthodox mathematical economics and game theory and suggests a reformalization on the basis of a strictly rigorous algorithmic mathematics This removes the current schizophrenia in mathematical economics and game theory where theory is entirely divorced from algorithmic applicability for experimental and computational exercises The chapters demonstrate the uncomputability and non constructivity of core areas of general equilibrium theory game theory and recursive macroeconomics The book also provides a fresh look at the kind of behavioural economics that lies behind Herbert Simon's work and resurrects a role for the noble classical traditions of induction and verification viewed and formalised now algorithmically It will therefore be of particular interest to postgraduate students and researchers in algorithmic economics game theory and classical behavioural economics

The Microeconomics of Complex Economies Wolfram Elsner, Torsten Heinrich, Henning Schwardt, 2014-04-15 *The Microeconomics of Complex Economies* uses game theory modeling approaches formal techniques and computer simulations to teach useful accessible approaches to real modern economies It covers topics of information and innovation including national and regional systems of innovation clustered and networked firms and open source open innovation production and use Its final chapter on policy perspectives and decisions confirms the value of the toolset Written so chapters can be used independently the book includes an introduction to computer simulation and pedagogical supplements Its formal accessible treatment of complexity goes beyond the scopes of neoclassical and mainstream economics The highly interdependent economy of the 21st century demands a reconsideration of economic theories Describes the usefulness of complex heterodox economics Emphasizes divergences and convergences with neoclassical economic theories and perspectives Fits easily into courses on intermediate microeconomics industrial organization and games through self contained chapters
