Ingenious Pursuits Building The Scientific Revolution:

Ingenious Pursuits Lisa Jardine, 2000-12-05 In this fascinating look at the European scientific advances of the seventeenth and early eighteenth centuries historian Lisa Jardine demonstrates that the pursuit of knowledge occurs not in isolation but rather in the lively interplay and frequently cutthroat competition between creative minds The great thinkers of that extraordinary age including Isaac Newton Johannes Kepler and Christopher Wren are shown in the context in which they lived and worked We learn of the correspondences they kept with their equally passionate colleagues and come to understand the unique collaborative climate that fostered virtuoso discoveries in the areas of medicine astronomy mathematics biology chemistry botany geography and engineering *Ingenious Pursuits* brilliantly chronicles the true intellectual revolution that continues to shape our very understanding of ourselves and of the world around us *Ingenious Pursuits* Hb Book Club Lisa Jardine, 1999-09-17

Empire and Science in the Making P. Boomgaard, 2013-10-23 Drawing on extensive new research and bringing much new scholarship before English readers for the first time this wide ranging volume examines how knowledge was created and circulated throughout the Dutch Empire and how these processes compared with those of the Imperial Britain Spain and Russia

The Palgrave Handbook of Early Modern Literature and Science Howard Marchitello, Evelyn Tribble, 2017-02-27 This book is about the complex ways in which science and literature are mutually informing and mutually sustaining It does not cast the literary and the scientific as distinct but rather as productively in distinct cultural practices for the two dozen new essays collected here the presiding concern is no longer to ask how literary writers react to scientific writers but rather to study how literary and scientific practices are imbricated These specially commissioned essays from top scholars in the area range across vast territories and produce seemingly unlikely unions between physics and rhetoric math and Milton Boyle and the Bible plague and plays among many others In these essays so called scientific writing turns out to traffic in metaphor wit imagination and playfulness normally associated with literature provides material forms and rhetorical strategies for thinking physics mathematics archeology and medicine

Key Concepts in Renaissance Literature Malcolm Hebron, 2008-05-09 The volume provides readers with a clear introduction to English Renaissance literary texts Concise but detailed entries are alphabetically arranged providing a coherent overview of central issues in the study of writings of the Renaissance era Cross referencing and suggestions for further reading indicate connections between topics *The Experimental Imagination* Tita Chico, 2018-06-05 Challenging the two cultures debate *The Experimental Imagination* tells the story of how literariness came to be distinguished from its epistemological sibling science as a source of truth about the natural and social worlds in the British Enlightenment Tita Chico shows that early science relied on what she calls literary knowledge to present its experimental findings More radically she contends that science was made intellectually possible because its main discoveries and technologies could be articulated in literary terms While early scientists deployed metaphor to describe the phenomena they defined and

imagination to cast themselves as experimentalists literary writers used scientific metaphors to make the case for the epistemological superiority of literary knowledge Drawing on literature as well as literary language tropes and interpretive methods literary knowledge challenges our dominant narrative of the scientific revolution as the sine qua non of epistemological innovation in the British Enlightenment With its recourse to imagination as a more reliable source of truth than any empirical account literary knowledge facilitates a redefinition of authority and evidence as well as of the self and society implicitly articulating the difference that would come to distinguish the arts and sciences [A Hybrid Imagination](#) Andrew Jamison, Steen Hyldgaard Christensen, Lars Botin, 2022-05-31 This book presents a cultural perspective on scientific and technological development As opposed to the story lines of economic innovation and social construction that tend to dominate both the popular and scholarly literature on science technology and society or STS the authors offer an alternative approach devoting special attention to the role played by social and cultural movements in the making of science and technology They show how social and cultural movements from the Renaissance of the late 15th century to the environmental and global justice movements of our time have provided contexts or sites for mixing scientific knowledge and technical skills from different fields and social domains into new combinations thus fostering what the authors term a hybrid imagination Such a hybrid imagination is especially important today as a way to counter the competitive and commercial hubris that is so much taken for granted in contemporary science and engineering discourses and practices with a sense of cooperation and social responsibility The book portrays the history of science and technology as an underlying tension between hubris literally the ambition to play god on the part of many a scientist and engineer and neglect the consequences and a hybrid imagination connecting scientific facts and technological artifacts with cultural understanding The book concludes with chapters on the recent transformations in the modes of scientific and technological production since the Second World War and the contending approaches to greening science and technology in relation to the global quest for sustainable development The book is based on a series of lectures that were given by Andrew Jamison at the Technical University of Denmark in 2010 and draws on the authors many years of experience in teaching non technical or contextual knowledge to science and engineering students The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED supported by the Danish Strategic Research Council from 2010 to 2013 Table of Contents Introduction Perceptions of Science and Technology Where Did Science and Technology Come From Science Technology and Industrialization Science Technology and Modernization Science Technology and Globalization The Greening of Science and Technology [A Theology of Higher Education](#) Mike Higton, 2012-03-16 In this book Mike Higton provides a constructive critique of Higher Education policy and practice in the UK the US and beyond from the standpoint of Christian theology He focuses on the role universities can and should play in forming students and staff in intellectual virtue in sustaining vibrant communities of inquiry and in serving the public good He argues both that modern

secular universities can be a proper context for Christians to pursue their calling as disciples to learn and to teach and that Christians can contribute to the flourishing of such universities as institutions devoted to learning for the common good In the process he sets out a vision of the good university as secular and religiously plural as socially inclusive and as deeply and productively entangled with the surrounding society Along the way he engages with a range of historical examples the medieval University of Paris the University of Berlin in the nineteenth century and John Henry Newman's work in Oxford and Dublin and with a range of contemporary writers on Higher Education from George Marsden to Stanley Hauerwas and from David Ford to Rowan Williams

How Modern Science Came into the World Floris Cohen, 2025-10-01 Once upon a time The Scientific Revolution of the 17th century was an innovative concept that inspired a stimulating narrative of how modern science came into the world Half a century later what we now know as the master narrative serves rather as a strait jacket so often events and contexts just fail to fit in No attempt has been made so far to replace the master narrative H Floris Cohen now comes up with precisely such a replacement Key to his path breaking analysis cum narrative is a vision of the Scientific Revolution as made up of six distinct yet narrowly interconnected revolutionary transformations each of some twenty five to thirty years duration This vision enables him to explain how modern science could come about in Europe rather than in Greece China or the Islamic world It also enables him to explain how half way into the 17th century a vast crisis of legitimacy could arise and in the end be overcome Building forth on his earlier *The Scientific Revolution A Historiographical Inquiry* 1994 his new book takes the latest researches duly into account while connecting these in highly innovative ways It is meant throughout as a constructive effort to break up all too deeply frozen patterns of thinking about the history of science

The Eco-Self in Early Modern English Literature Elizabeth Gruber, 2025-10-01 *The Eco Self in Early Modern English Literature* tracks an important shift in early modern conceptions of

selfhood arguing that the period hosted the birth of a new subset of the human the eco self which melds a deeply introspective turn with an abiding sense of humans embedment in the world A confluence of cultural factors produced the relevant changes Of paramount significance was the rapid spread of literacy in England and across Europe reading transformed the relationship between self and world retooled moral reasoning and even altered human anatomy This book pursues the salutary possibilities including the ecological benefits of this redesigned self by advancing fresh readings of texts by William Shakespeare Christopher Marlowe John Webster and Margaret Cavendish The eco self offers certain refinements to ecological theory by renewing appreciation for the rational deliberative functions that distinguish humans from other species

Technology, Business and the Market John S. Sheldrake, 2016-03-09 John Sheldrake's long experience of teaching business and management to engineers has highlighted a gap in the knowledge of students and practitioners alike between their grasp of developments in science and technology and how these developments lead to the creation of successful products Using case studies *Technology Business and the Market* explores the impact of new materials techniques and technologies and looks at the links between innovation entrepreneurship business including finance design manufacturing branding and marketing The author examines the ways in which scientific endeavour is conditioned and even distorted by contextual issues such as finance and fashion This demonstration of the synthesis of technology business and the market has relevance for students practitioners and policy makers in established and emerging markets

Ernan McMullin and Critical Realism in the Science-Theology Dialogue Paul L. Allen, 2016-05-13 Scientists philosophers and theologians have wrestled repeatedly with the question of whether knowledge is similar or different in their various understandings of the world and God Although agreement is still elusive the epistemology of critical realism associated with Ian Barbour John Polkinghorne and Arthur Peacocke remains widely credible Relying on the lifetime work of philosopher Ernan McMullin this book expands our understanding of critical realism beyond a permanent stand off between the subjective and objective whether in science or theology Critical realism illuminates the subject and the objectively known simultaneously Responding to criticisms made against it this book defends critical realism in science and theology with a specific role to play in our understanding of God

Beyond Habermas Christian Emden, David R. Midgley, 2013 During the 1960s the German philosopher Jürgen Habermas introduced the notion of a bourgeois public sphere in order to describe the symbolic arena of political life and conversation that originated with the cultural institutions of the early eighteenth century since then the public sphere itself has become perhaps one of the most debated concepts at the very heart of modernity For Habermas the tension between the administrative power of the state with its understanding of sovereignty and the emerging institutions of the
