InfoWorld, 1995-02-13 InfoWorld is targeted to Senior IT professionals Content is segmented into Channels and Topic Centers InfoWorld also celebrates people companies and projects Free Innovation Eric Von Hippel, 2024-04-30 A leading innovation scholar explains the growing phenomenon and impact of free innovation in which innovations developed by consumers and given away for free In this book Eric von Hippel author of the influential *Democratizing Innovation* integrates new theory and research findings into the framework of a free innovation paradigm Free innovation as he defines it involves innovations developed by consumers who are self rewarded for their efforts and who give their designs away for free It is an inherently simple grassroots innovation process unencumbered by compensated transactions and intellectual property rights Free innovation is already widespread in national economies and is steadily increasing in both scale and scope Today tens of millions of consumers are collectively spending tens of billions of dollars annually on innovation development However because free innovations are developed during consumers unpaid discretionary time and are given away rather than sold their collective impact and value have until very recently been hidden from view This has caused researchers governments and firms to focus too much on the Schumpeterian idea of innovation as a producer dominated activity Free innovation has both advantages and drawbacks Because free innovators are self rewarded by such factors as personal utility learning and fun they often pioneer new areas before producers see commercial potential At the same time because they give away their innovations free innovators generally have very little incentive to invest in diffusing what they create which reduces the social value of their efforts The best solution von Hippel and his colleagues argue is a division of labor between free innovators and producers enabling each to do what they do best The result will be both increased producer profits and increased social welfare a gain for all Machine Learning and Knowledge Discovery in Databases. Lakhani, 2016-03-04 A comprehensive and multidisciplinary view of the emerging paradigm of user and open innovation offering both theoretical and empirical perspectives The last two decades have witnessed an extraordinary growth of new models of managing and organizing the

innovation process that emphasizes users over producers Large parts of the knowledge economy now routinely rely on users communities and open innovation approaches to solve important technological and organizational problems This view of innovation pioneered by the economist Eric von Hippel counters the dominant paradigm which cast the profit seeking incentives of firms as the main driver of technical change In a series of influential writings von Hippel and colleagues found empirical evidence that flatly contradicted the producer centered model of innovation Since then the study of user driven innovation has continued and expanded with further empirical exploration of a distributed model of innovation that includes communities and platforms in a variety of contexts and with the development of theory to explain the economic underpinnings of this still emerging paradigm This volume provides a comprehensive and multidisciplinary view of the field of user and open innovation reflecting advances in the field over the last several decades The contributors including many colleagues of Eric von Hippel offer both theoretical and empirical perspectives from such diverse fields as economics the history of science and technology law management and policy The empirical contexts for their studies range from household goods to financial services After discussing the fundamentals of user innovation the contributors cover communities and innovation legal aspects of user and community innovation new roles for user innovators user interactions with firms and user innovation in practice describing experiments toolkits and crowdsourcing and crowdfunding Contributors Efe Aksuyek Yochai Benkler James Bessen Jörn H Block Annika Bock Helena Canh o Jeroen P J de Jong Emmanuelle Fauchart Dominique Foray Nikolaus Franke Johann Füller Helena Garriga Fred Gault Fredrik Hacklin Dietmar Harhoff Joachim Henkel Cornelius Herstatt Christoph Hienrich Venkat Kuppuswamy Karim R Lakhani Christopher Lettl Christian Lütjens Ethan Mollick Hidehiko Nishikawa Alessandro Nuvolari Susumu Ogawa Pedro Oliveira Stefan Perkmann Berger Frank Piller Christina Raasch Susanne Roiser Fabrizio Salvador Pamela Samuelson Tim Schweisfurth Sonali K Shah Christoph Stockstrom Katherine J Strandburg Stefan Thomke Andrew W Torrance Mary Tripsas Georg von Krogh

Essentials of 3D Biofabrication and Translation Anthony Atala, James J Yoo, 2015-07-17 Essentials of 3D

Biofabrication and Translation discusses the techniques that are making bioprinting a viable alternative in regenerative medicine. The book runs the gamut of topics related to the subject including hydrogels and polymers, nanotechnology, toxicity testing, and drug screening platforms, also introducing current applications in the cardiac, skeletal, and nervous systems and organ construction. Leaders in clinical medicine and translational science provide a global perspective of the transformative nature of this field, including the use of cells, biomaterials, and macromolecules to create basic building blocks of tissues and organs, all of which are driving the field of biofabrication to transform regenerative medicine. Provides a new and versatile method to fabricating living tissue. Discusses future applications for 3D bioprinting technologies, including use in the cardiac, skeletal, and nervous systems and organ construction. Describes current approaches and future challenges for translational science. Runs the gamut of topics related to the subject from hydrogels and polymers to nanotechnology, toxicity testing, and drug screening platforms.

Innovation in Developing Countries Nobuaki Matsunaga, 2019-02-06 The main focus of this book is innovation for developing countries: what is the innovation for? what are the current conditions of the innovation and how to effectively innovate in developing economies? It contains the latest insights and analyses of innovation based on intensive interviews as well as primary and secondary data of manufacturing firms in developing countries: Vietnam and Laos in particular. Innovation requires something new. Integration of deep understanding of innovation and econometric analyses are a new combination in this book, which contrasts with other similar books in the field. This new approach may benefit policy makers as well as scholars and firms in poor countries. The main points of the book are summarized as follows: First, for most poor countries, learning innovation is considered the key to economic growth, rather than leading edge innovation, which is a more popular theme in similar books on innovation. Second, an overwhelming majority of innovations currently used in poor countries are developed in advanced countries, so technology transfer and learning from the latter are a fundamental source of innovation in the former. Third, a surprisingly high rate of firms (around 50%) reported that they introduced new or significantly improved products or processes in poor countries, and this high innovation rate is a great benefit to be enhanced by government policies. Fourth, the common factors driving innovation of manufacturing firms in Vietnam and Laos are 1) human capital, 2) social capital, and 3) innovation in the past. Fifth, the impact of innovation on firm performance is found to be mixed in these countries. Sixth, so far, almost all studies on innovation have focused on product or process innovation, but additional light is shed here on organizational innovation.
