Optimization of Multistage Hydraulic Fracturing Treatment for Maximization of the Tight Gas Productivity

Mengting Li, 2018-12-17 Hydraulic fracturing is essential technology for the development of unconventional resources such as tight gas So far there are no numerical tools which can optimize the whole process from geological modeling hydraulic fracturing until production simulation with the same 3D model with consideration of the thermo hydro mechanical coupling In this dissertation a workflow and a numerical tool chain were developed for design and optimization of multistage hydraulic fracturing in horizontal well regarding a maximum productivity of the tight gas wellbore After the verification a full 3D reservoir model is generated based on a real tight gas field in the North German Basin Through analysis of simulation results a new calculation formula of FCD was proposed which takes the proppant position and concentration into account and can predict the gas production rate more accurately However not only FCD but also proppant distribution and hydraulic connection of stimulated fractures to the well geological structure and the interaction between fractures are determinant for the gas production volume Through analysis the numerical results of sensitivity analysis and optimization variations there is no unique criterion to determine the optimal number and spacing of the fractures it should be analyzed firstly in detail to the actual situation and decided then from case to case *Fluid Dynamics in Complex Fractured-Porous Systems* Boris Faybishenko, Sally M. Benson, John E. Gale, 2015-06-04 Despite of many years of studies predicting fluid flow heat and chemical transport in fractured porous media remains a challenge for scientists and engineers worldwide This monograph is the third in a series on the dynamics of fluids and transport in fractured rock published by the American Geophysical Union Geophysical Monograph Series Vol 162 2005 and Geophysical Monograph No 122 2000 This monograph is dedicated to the late Dr Paul Witherspoon for his seminal influence on the development of ideas and methodologies and the birth of contemporary fractured rock hydrogeology including such fundamental and applied problems as environmental remediation exploitation of oil gas and geothermal resources disposal of spent nuclear fuel and geotechnical engineering This monograph addresses fundamental and applied scientific questions and is intended to assist scientists and practitioners bridge gaps in

Advances in Spatio-Temporal Analysis Xinming Tang, Yaolin

Liu, Jixian Zhang, Wolfgang Kainz, 2007-08-23 Developments in Geographic Information Technology have raised the expectations of users. A static map is no longer enough; there is now demand for a dynamic representation. Time is of great importance when operating on real world geographical phenomena, especially when these are dynamic. Researchers in the field of Temporal Geographical Information Systems (TGIS) have been developing methods of incorporating time into geographical information systems. Spatio-temporal analysis embodies spatial modelling, spatio-temporal modelling and spatial reasoning and data mining. Advances in Spatio-Temporal Analysis contributes to the field of spatio-temporal analysis presenting innovative ideas and examples that reflect current progress and achievements. **Rock Support and**

Reinforcement Practice in Mining A.G. Thompson, 2018-10-08 The text broadly covers recent developments in ground control techniques and their application at operating mines worldwide. Specific topics include design and analysis of support and reinforcement in metalliferous mines, mesh shotcrete and membrane support systems and strata control in coal mines. **New numerical approaches to model hydraulic fracturing in tight reservoirs with consideration of hydro-mechanical coupling effects** Lei Zhou, 2014-03-20 In this dissertation two new numerical approaches for hydraulic fracturing in tight reservoirs were developed. A more physical based numerical 3D model was developed for simulating the whole hydraulic fracturing process including fracture propagation, closure and contact as well as proppant transport and settling. In this approach rock formation pore and fracture systems were assembled together in which hydro-mechanical coupling effect, proppant transport and settling as well as their influences on fracture closure and contact were fully considered. A combined FDM and FVM schema was used to solve the problem. Three applications by using the new approach were presented. The results illustrated the whole hydraulic fracturing process well and seemed to be logical which confirmed the ability of the developed approach to model the in situ hydraulic fracturing operation from injection start till fully closure. In order to investigate the orientation problem of hydraulic fracturing in tight reservoir a new approach for simulating arbitrary fracture propagation and orientation in 2D was developed. It was solved by a hybrid schema of XFEM and FVM. Three numerical studies were illustrated which proved the ability of the developed approach to solve the orientation problem in field cases.
