Ohta,Wenqi Hu,2018-07-03 This book is a printed edition of the Special Issue Microdevices and Microsystems for Cell Manipulation that was published in *Micromachines* The Spirit of the Game Paul Emory Putz,Assistant Director Truett Seminary's Faith & Sports Institute Paul Emory Putz,2024-10-02 Displays of religious faith have become commonplace on America s baseball diamonds basketball courts football fields and beyond How did religion become so entwined with big time sports in America The Spirit of the Game provides the answer to this question by offering a sweeping history of the Christian athlete movement in the United States and its impact on American religion and the religion of sports **Education** ,1912 細胞機械の力学 (Japan),1991 *Intermediate Filament Mechanics Across Scales - From Single Filaments to Single Interactions and Networks in Cells* Anna Veronika Schepers,2022 The mechanical properties of cells are largely determined by the cytoskeleton The cytoskeleton is an intricate and complex structure formed by protein filaments motor proteins and crosslinkers The three main types of protein filaments are microtubules actin filaments and intermediate filaments IFs Whereas the proteins that form microtubules and actin filaments are exceptionally conserved throughout cell types and organisms the family of IFs is diverse For example the IF protein vimentin is expressed in relatively motile fibroblasts and keratin IFs are found in epithelial cells This variety of IF proteins might therefore be linked to the various mechanical properties of different cell types In the scope of this thesis I combine studies of IF mechanics on different time scales and in systems of increasing complexity from single filaments to networks in cells This multiscale approach allows for the simplification necessary to interpret observations while adding increasing physiological context in subsequent experiments We especially focus on the tunability of the IF mechanics by environmental cues in these increasingly complex systems In a series of experiments including single filament elongation studies single filament stretching measurements with optical tweezers filament filament interaction measurements with four optical tweezers microrheology and isotropic cell stretching we characterize how electrostatic pH and ion concentration and hydrophobic interactions detergent provide various mechanisms by which the mechanics of the IF cytoskeleton can be tuned

These studies reveal how small changes such as charge shifts influence IF mechanics on multiple scales In combination with simulations we determine the mechanisms by which charge shifts alter single vimentin filament mechanics and we extract energy landscapes for interactions between single filaments Such insights will provide a deeper understanding of the mechanisms by which cells can maintain their integrity and adapt to the mechanical requirements set by their environment

The Law of Targeting William H. Boothby, 2012-08-16 Comprehensively examining all aspects of the law of targeting in military operations the book assesses controversies in the rules governing targeting including the use of human shields the level of care required in a bombing campaign and in the determination of whether someone is directly participating in hostilities
