movements such as psychomotor slowing catatonia neurological soft signs NSS reduction in motor activity or extrapyramidal symptoms EPS These symptoms have not always received the attention they deserve although they can be observed in a wide range of psychiatric illnesses including mood disorders psychotic disorders anxiety disorders pervasive developmental disorders and personality disorders Nevertheless these symptoms seem to have prognostic value on clinical and functional outcome in several pathologies In the late 19th century the founding fathers of modern psychiatry including Kahlbaum Wernicke Kraepelin and Bleuler had a strong focus on psychomotor abnormalities in their description and definitions of psychiatric illnesses and systematically recognized these as core features of several psychiatric pathologies Nevertheless emphasis on these symptoms has reduced substantially since the emergence of psychopharmacology given the association between antipsychotics or antidepressants and medication induced motor deficits This has resulted in the general idea that most if not all psychomotor deficits were merely side effects of their treatment rather than intrinsic features of the illness Yet the last two decades a renewed interest in these deficits can be observed and has yielded an exponential growth of research into these psychomotor symptoms in several psychiatric illnesses This recent evolution is also reflected in the increased appreciation of these symptoms in the DSM 5 As a result of this increased focus new insights into the clinical and demographical presentation the etiology the course the prognostic value as well as treatment aspects of psychomotor symptomatology in different illnesses has emerged Still many new questions arise from these findings This research topic is comprised of all types of contributions original research reviews and opinion piece with a focus on psychomotor symptomatology in a psychiatric illness especially research focusing on one or more of the following topics the clinical presentation of the psychomotor syndrome the course through the illness the diagnostical specificity of the syndrome the underlying neurobiological or neuropsychological processes new assessment techniques pharmacological or non pharmacological treatment strategies

The Informatics Handbook S.A. Fist,2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science *Municipal Journal* ,1923
