Department of Computer Science,2009     **Recent Advances in Motion Analysis** Francesco Di Nardo, Sandro Fioretti,2021-05-05 The advances in the technology and methodology for human movement capture and analysis over the last decade have been remarkable Besides acknowledged approaches for kinematic dynamic and electromyographic EMG analysis carried out in the laboratory more recently developed devices such as wearables inertial measurement units ambient sensors and cameras or depth sensors have been adopted on a wide scale Furthermore computational intelligence CI methods such as artificial neural networks have recently emerged as promising tools for the development and application of intelligent systems in motion analysis Thus the synergy of classic instrumentation and novel smart devices and techniques has created unique capabilities

in the continuous monitoring of motor behaviors in different fields such as clinics sports and ergonomics However real time sensing signal processing human activity recognition and characterization and interpretation of motion metrics and behaviors from sensor data still representing a challenging problem not only in laboratories but also at home and in the community This book addresses open research issues related to the improvement of classic approaches and the development of novel technologies and techniques in the domain of motion analysis in all the various fields of application Human Motion Bodo Rosenhahn, Reinhard Klette, Dimitris Metaxas, 2007-10-24 Edward Muybridge 1830 1904 is known as the pioneer in motion capturing with his famous experiments in 1887 called Animal Locomotion Since then the field of animal or human motion analysis has grown in many directions However research and results that involve human like animation and the recovery of motion is still far from being satisfactory The modelling tracking and understanding of human motion based on video sequences as a research field has increased in importance particularly in the last decade with the emergence of applications in sport sciences medicine biomechanics animation online games surveillance and security Progress in human motion analysis depends on empirically anchored and grounded research in computer vision computer graphics and biomechanics Though these fields of research are often treated separately human motion analysis requires the integration of methodologies from computer vision and computer graphics Furthermore the understanding and use of biomechanics constraints improves the robustness of such an approach This book is based on a June 2006 workshop held in Dagstuhl Germany This workshop brought together for the first time researchers from the aforementioned disciplines Based on their diverse perspectives these researchers have been developing new methodologies and contributing through their findings to the domain of human motion analysis The interdisciplinary character of the workshop allowed people to present a wide range of approaches that helped stimulate intellectual discussions and the exchange of new ideas
