B A S I C S

Short run → medium run → long run

IMPORTANT WORDS

Aggregate output = GDP
The unemployment rate
The inflation rate
Okuns Law & Phillips Curve

The measure of aggregate output is called gross domestic product (GDP).

GDP is the value of final goods and services produced in the economy during a given period.

GDP is the sum of value added in the economy during a given period.

GDP is the value of incomes in the economy during a given period.

Intermediate good
→ Subsequent production

we only count final goods

Final good
→ Final product

Production side
Income side

always equal
 $PS = IS$

NOMINAL & REAL GDP

Nominal GDP is the sum of the quantities of final goods produced, times their current price ($Q \cdot P = N$)

Real GDP is the sum of the quantities of final goods times constant prices. (→ Basejahr)

$Y = \text{Real GDP}$ $t = \text{Zeitpunkt}$

$NY = \text{Nominal GDP}$

Can increase for two reasons:
- production of goods increases
- price of goods increases

Real GDP in chained prices reflects relative prices that change with time - chained prices

Example:

t	Q	P	N-GDP	R-GDP (→ 2007)
2008	40	20	800	270
2009	42	22	924	282
2010	43	26	1118	312

Base year

Nominal GDP is also called GDP at current prices / current

Real GDP is also called GDP in terms of goods / in constant euro / adjusted for inflation / in (base year) prices

Historic pricing
→ Baumgartner method in case of changing quality. Example:
Quality increase of 45%
Price decrease of 3%
Quality-adjusted price has fallen by about 25%

UNEMPLOYMENT RATE

Labour = employment + unemployment force

$$L = N + U$$

Unemployment is the number of people who do not have a job, but are looking for one

L: not in the labour force: Retired at home, kids, retired people, injured, etc.

The unemployment rate is the ratio of the number of people who are unemployed to the number of people in the labour force. $u = U/L$

unemployment rate = unemployment / labour force

Discouraged workers are those who give up looking for a job and so no longer counted as unemployed.

The participation rate is the ratio of the labour force to the total population of working age.

Background + importance

- effect on welfare of the unemployed
- Signal economy is not using human resources efficiently
- Low unemployment rate can lead to labour shortages

INFLATION RATE

Inflation is a sustained rise in the general level of prices

The inflation rate is the rate at which the price level increases.

Deflation is a sustained decline in the price level.

Background + importance

- Affects income distribution when all else prices and wages rise proportionally
- Leads to distortions (wobbling) due to uncertainty, some prices that are fixed by law or regulation, and its interaction with taxation.
- Best rate of inflation = 1-4%

GDP DEFLATOR

The GDP deflator in year t (P_t) is the ratio of nominal GDP to real GDP in year t

$$P_t = \frac{\text{Nominal GDP}_t}{\text{Real GDP}_t} = \frac{NY_t}{Y_t}$$

→ is called an index number

Nominal GDP is equal to the GDP deflator times real GDP

$$NY_t = P_t \cdot Y_t$$

The rate of change = rate of inflation

$$\text{rate of change } \pi_t = \left(\frac{P_t - P_{t-1}}{P_{t-1}} \right)$$

Rate of growth of nominal GDP is equal to the rate of inflation plus the rate of growth of real GDP

Example:

Real GDP $Y_{2020} = 4000$

Nominal GDP $NY_{2020} = 4400$

GDP deflator $P_{2020} = 1$

$P_{2020} = \frac{4400}{4000} = 1.1 \rightarrow \text{GDP deflator}$

$\pi_{2020} = \left(\frac{1.1 - 1}{1} \right) = 0.1 = 10\% \text{ rate of inflation}$

OKUNS LAW

Output growth that is higher than trend is associated with a reduction in the unemployment rate. Output growth that is lower than trend is associated with an increase in the unemployment rate.

PHILLIPS CURVE

A low unemployment rate leads to an increase in the inflation rate. A high unemployment rate leads to a decrease in the inflation rate.

Short run = movement in output driven by movement in demand

medium run = level of output determined by supply factors

long run = economy depends on technology, resources

Macroeconomics and the Phillips Curve Myth James Forder, 2014 This book reconsiders the role of the Phillips curve in macroeconomic analysis in the first twenty years following the famous work by A W H Phillips after whom it is named It argues that the story conventionally told is entirely misleading In that story Phillips made a great breakthrough but his work led to a view that inflationary policy could be used systematically to maintain low unemployment and that it was only after the work of Milton Friedman and Edmund Phelps about a decade after Phillips that this view was rejected On the contrary a detailed analysis of the literature of the times shows that the idea of a negative relation between wage change and unemployment supposedly Phillips discovery was commonplace in the 1950s as were the arguments attributed to Friedman and Phelps by the conventional story And perhaps most importantly there is scarcely any sign of the idea of the inflation unemployment tradeoff promoting inflationary policy either in the theoretical literature or in actual policymaking The book demonstrates and identifies a

number of main strands of the actual thinking of the 1950s 1960s and 1970s on the question of the determination of inflation and its relation to other variables The result is not only a rejection of the Phillips curve story as it has been told and a reassessment of the understanding of the economists of those years of macroeconomics but also the construction of an alternative and historically more authentic account of the economic theory of those times A notable outcome is that the economic theory of the time was not nearly so naive as it has been portrayed

Macroeconomics, Trade, and Social Welfare Michihiro Ohyama, 2016-07-11 This book develops new original methods of welfare comparison and

comparative dynamics between distinct and discretely positioned rather than continuously related socioeconomic situations. These methods are not only realistic but also extremely relevant to serious economic problems. Using them, the book sheds illuminating new light on the theoretical analysis of Keynesian economics and other important issues of political economy. For instance, it shows that the principle of effective demand applies exactly as Keynes put it to the unemployment equilibrium in the short run. It also shows that the equilibrium may change along the expansion path as the government chooses to vary its expenditure to maximize national welfare. The same methods are effectively employed theoretically to investigate modern trade policy issues such as gains from trade, the theory of tariffs, free trade agreements, and the role of the WTO. Those methods are also used to study the welfare and efficiency of various socioeconomic situations.

Kregel, 2024-08-13 The title of this book may seem to confuse two separate disciplines finance and macroeconomics However it is based on the fact that finance and macroeconomics were integrated at least in their formative years It is a natural extension of a line of research that dominated monetary theory in the early part of the 20th century Economists such as Keynes Robertson Hawtrey Fisher Hayek and Schumpeter sought to blend the analysis of business cycles with their often first hand experience of money and financial markets The result was a monetary theory that provided the fertile background to what came to be called macroeconomics However in the post war period the monetary aspects of this theory dropped out of sight in the neo classical synthesis and hydraulic Keynesianism Post Keynesians such as Davidson and Minsky have done much to try to restore the monetary aspects of the theory but the other more technical aspects of financial analysis have been ignored This book aims to show how technical aspects of financial were initially part of the early investigations of macroeconomics and how they may be used to provide a realistic
