Learning and Expectations in Macroeconomics George W. Evans, Seppo Honkapohja, 2012-01-06 A crucial challenge for economists is figuring out how people interpret the world and form expectations that will likely influence their economic activity Inflation asset prices exchange rates investment and consumption are just some of the economic variables that are largely explained by expectations Here George Evans and Seppo Honkapohja bring new explanatory power to a variety of expectation formation models by focusing on the learning factor Whereas the rational expectations paradigm offers the prevailing method to determining expectations it assumes very theoretical knowledge on the part of economic actors Evans and Honkapohja contribute to a growing body of research positing that households and firms learn by making

forecasts using observed data updating their forecast rules over time in response to errors This book is the first systematic development of the new statistical learning approach Depending on the particular economic structure the economy may converge to a standard rational expectations or a rational bubble solution or exhibit persistent learning dynamics The learning approach also provides tools to assess the importance of new models with expectational indeterminacy in which expectations are an independent cause of macroeconomic fluctuations Moreover learning dynamics provide a theory for the evolution of expectations and selection between alternative equilibria with implications for business cycles asset price volatility and policy This book provides an authoritative treatment of this emerging field developing the analytical techniques in detail and using them to synthesize and extend existing research

Behavioural Macroeconomics

Paul De Grauwe, Yuemei Ji, 2019-10-25 Modern macroeconomics has been based on the paradigm of the rational individual capable of understanding the complexity of the world This has created a very shallow theory of the business cycle in which nothing happens in the macroeconomy unless shocks occur from outside Behavioural Macroeconomics Theory and Policy uses a different paradigm It assumes that individual agents experience cognitive limitations preventing them from having rational expectations Instead these individuals use simple rules of behaviour Behavioural Macroeconomics introduces rationality by allowing individuals to learn from their mistakes and to switch to the rules that perform better It introduces the idea of endogenously generated animal spirits that drive the business cycle and are in turn influenced by it and applies this model to shed new light on a number of important issues It analyses the role of fiscal policy in stabilizing the economy while maintaining debt sustainability expands the model to include a banking sector and show how banks amplify the booms and busts and explains how animal spirits help to synchronize the business cycles across countries The model set out in Behavioural Macroeconomics leads to very different policy implications from the mainstream macroeconomic model It shows how policymakers have a responsibility to stabilize an otherwise unstable system

Macroeconomic Policy and Steady Growth in China Zhang Xiaojing,2021-09-19 Since the appearance of macroeconomics in the 1940s economists have created many theoretical frameworks to explain the origin and mechanism of economic fluctuations However few of these have managed to gain explanatory power over reality nor can they solve real life problems This book proposes a new macroeconomic paradigm that makes breakthroughs in these areas Based on a balance sheet approach and macro financial linkage analysis this book carries out a comprehensive analysis of the trends within China s macroeconomy in 2020 The

author argues that the COVID 19 pandemic created a great degree of uncertainty therefore supply side structural reform and improved total factor productivity have been promoted to ensure a policy of steady growth Given the declining economic growth rate in percentage terms China has needed to adapt to a moderate increase in the leverage ratio while applying more effective fiscal policies to achieve a dynamic balance between stable growth and risk prevention Scholars and students of economics and finance especially Chinese economics will find this book a useful reference

Rational Expectations Models with a Continuum of Convergent Solutions Michael Mussa, 1984 This paper examines five examples of rational expectations models with a continuum of convergent solutions and demonstrates serious difficulties in the economic interpretation of these solutions The five examples are 1 a model of optimal capital accumulation with a negative rate of time preference 2 Taylor's 1977 linear rational expectations model of macroeconomic equilibrium 3 Calvo's 1984 model of contract setting and price dynamics 4 Obstfeld's 1984 equilibrium model of monetary dynamics with individual optimizing agents and 5 Calvo's 1978 life cycle model of savings and asset valuation In every case when these models yield a continuum of convergent infinite horizon solutions these solutions fail to exhibit economically appropriate forward looking dependence of the endogenous variables on the paths of the exogenous forcing variables a difficulty that does not arise under the circumstances where these models yield unique convergent infinite horizon solutions Further the three models that have natural finite horizon versions either lack finite horizon solutions or have solutions that do not converge to any of the infinite horizon solutions Again this difficulty arises only under the circumstances where these models have a continuum of infinite horizon solutions

Rational Expectations in Macroeconomic Models P. Fisher, 2013-04-17 It is commonly believed that macroeconomic models are not useful for policy analysis because they do not take proper account of agents' expectations Over the last decade mainstream macroeconomic models in the UK and elsewhere have taken on board the Rational Expectations Revolution by explicitly incorporating expectations of the future In principle one can perform the same technical exercises on a forward expectations model as on a conventional model and more Rational Expectations in Macroeconomic Models deals with the numerical methods necessary to carry out policy analysis and forecasting with these models These methods are often passed on by word of mouth or confined to obscure journals Rational Expectations in Macroeconomic Models brings them together with applications which are interesting in their own right There is no comparable textbook in the literature The specific subjects include i solving for model consistent expectations ii the choice of terminal condition and time horizon iii experimental design i.e. the effect of temporary vs permanent anticipated vs unanticipated shocks deterministic vs stochastic dynamic vs static simulation iv the role of exchange rate v optimal control and inflation output tradeoffs The models used are those of the Liverpool Research Group in Macroeconomics the London Business School and the National Institute of Economic and Social Research
