Macroeconomics in Emerging Markets Peter J. Montiel,2011-04-29 The macroeconomic experience of emerging and developing economies has tended to be quite different from that of industrial countries Compared to industrial countries emerging and developing economies have tended to be much more unstable with more severe boom bust cycles episodes of high inflation and a variety of financial crises This textbook describes how the standard macroeconomic models that are used in industrial countries can be modified to help understand this experience and how institutional and policy reforms in emerging and developing economies may affect their future macroeconomic performance This second edition differs from the first in offering extensive new material on themes such as fiscal institutions inflation targeting emergent market crises and the Great Recession numerous application boxes end of chapter questions references for each chapter more diagrams less taxonomy and a more reader friendly narrative and enhanced integration of all parts of the work *Macroeconomic Theory* Fernando de Holanda Barbosa,2024-12-24 Macroeconomics is the application of economic theory to the study of the economy's growth cycle and price level determination Macroeconomics takes account of stylized facts observed in the real world and builds theoretical frameworks to explain such facts Economic growth is a stylized fact of market economies since England's nineteenth century industrial revolution Until then poverty was a common good for humanity Economic growth consists in the persistent smooth and sustained increase of per capita income A market economy shows periods of expanding and contracting economic activity This phenomenon is the economic cycle The price of money is the amount of goods bought with one unit of money in other words the inverse of the price level Determination of the price level or the value of money is a fascinating subject in a fiat money economy Revised and updated the second edition introduces a number of new topics including the New Keynesian IS Curve Real BusinessCycles and the Consumption Asset Pricing Model as well as updated end

of chapter exercises      **Recursive Macroeconomic Theory** Lars Ljungqvist, Thomas J. Sargent, 2004 A significant new edition of a text that offers both tools and sample applications extensive revisions and seven new chapters improve and expand upon the original treatment      **Development Macroeconomics** Pierre-Richard Agénor, Peter J. Montiel, 2015-06-23 The global financial crisis triggered severe shocks for developing countries whose embrace of greater commercial and financial openness has increased their exposure to external shocks both real and financial This new edition of Development Macroeconomics has been fully revised to address the more open and less stable environment in which developing countries operate today Describing the latest advances in this rapidly changing field the book features expanded coverage of public debt and the management of capital inflows as well as new material on fiscal discipline monetary policy regimes currency banking and sovereign debt crises currency unions and the choice of an exchange rate regime A new chapter on dynamic stochastic general equilibrium DSGE models with financial frictions has been added to reflect how the financial crisis has reshaped our thinking on the role of such frictions in generating and propagating real and financial shocks The book also discusses the role of macroprudential regulation both independently and through its interactions with monetary policy in preserving financial and macroeconomic stability Now in its fourth edition Development Macroeconomics remains the definitive textbook on the macroeconomics of developing countries The most authoritative book on the subject now fully revised and expanded Features new material on fiscal discipline monetary policy regimes currency banking and sovereign debt crises and much more Comes with online supplements on informal financial markets stabilization programs the solution of DSGE models with financial frictions and exchange rate crises      **Knowledge, Information, and Expectations in Modern Macroeconomics** Philippe Aghion, 2003-01-26 Assembling some of the leading figures in the field of macroeconomics this text highlights the continuing influence of the ideas of Edmund Phelps since the early 1960s The contributions address many of the most important current areas of macroeconomic research in 2003      *Insights from Book Translations on the International Diffusion of Knowledge* Isabelle Yin Fong Sin, 2011 Increases in the stock of ideas possessed by societies are central to modern economic growth The implications of idea flows are striking Klenow and Rodriguez Clare 2005 estimate world production would be just 6% of its current level if countries did not share ideas Yet although theoretical economists have studied ideas and their diffusion extensively empirical studies are scarce because ideas are inherently difficult to measure Previous empirical studies of idea flows have tended to use proxies such as trade flows foreign direct investment migration and patent citations However with the exception of the latter these measures are not pure idea flows and do not capture the key properties of ideas namely non rivalry and disembodiedness My research proposes a novel measure of idea flows namely book translations and uses it to study the factors that affect the international diffusion of ideas Book translations are an attractive way to quantify idea flows because they are both non rival and disembodied they are a pure measure of idea flows rather than a by product of a process such as trade or migration and their key purpose is to make

the ideas contained in the book accessible to speakers of another language In chapter 2 I outline the economics literature on ideas and their diffusion I motivate and discuss book translations as a measure of idea flows and provide a framework for thinking about when translations are likely to occur I describe the translation data in chapter 3 The source of the data is an international bibliography of translations collected by the United Nations Educational Scientific and Cultural Organization From this bibliography I compile a data set of over 2 million translations published in 80 countries since the 1949 including detailed information on each title translated I then document the main patterns of translation flows In chapter 4 I employ a gravity framework to study how distance affects translation flows between countries This sheds light both on the barriers to international idea diffusion and on the underlying causes of the negative relationship between distance and trade Translations differ from trade in that they have zero transportation costs but they are subject to similar search and information costs and costs of forming contracts I estimate a gravity model where bilateral translation flows vary with the sizes of the countries and the distance between them and find the elasticity of translations with respect to distance to be between 0.3 and 0.5 for the 1990s these values are significantly smaller than the equivalent elasticity for trade found in the literature suggesting a significant role for transportation costs in the distance effect on trade In addition I present several pieces of evidence that suggest supply side frictions play a larger role in the distance effect on translations than do consumer preferences For instance the speed with which titles are translated which is likely to largely capture supply frictions as opposed to demand factors decreases significantly with distance Finally in joint work with Ran Abramitzky chapter 5 I study how the collapse of the Communist regime in Eastern Europe at the close of the 1980s affected the international diffusion of ideas We show that while translations between Communist languages decreased by two thirds with the collapse Western to Communist translations increased by a factor of seven and reached Western levels Convergence was full in economically beneficial fields such as sciences and only partial in culturally beneficial fields such as history The effects were larger for more Western oriented countries These findings help us understand how institutions shape the international diffusion of knowledge and demonstrate the importance of preferences in determining the type of ideas that diffuse into a country
