A Guide to Numerical Modelling in Systems Biology Peter Deuffhard, Susanna Röblitz, 2015-07-06 This book is intended for students of computational systems biology with only a limited background in mathematics Typical books on systems biology merely mention algorithmic approaches but without offering a deeper understanding On the other hand mathematical books are typically unreadable for computational biologists The authors of the present book have worked hard to fill this gap The result is not a book on systems biology but on computational methods in systems biology This book originated from courses taught by the authors at Freie Universität Berlin The guiding idea of the courses was to convey those mathematical insights that are indispensable for systems biology teaching the necessary mathematical prerequisites by means of many illustrative examples and without any theorems The three chapters cover the mathematical modelling of biochemical and physiological processes numerical simulation of the dynamics of biological networks and identification of model parameters by means of comparisons with real data Throughout the text the strengths and weaknesses of numerical algorithms with respect to various systems biological issues are discussed Web addresses for downloading the corresponding software are also included

Mathematical Models of Tumor-Immune System Dynamics Amina Eladdadi, Peter Kim, Dann Mallet, 2014-11-06 This collection of papers offers a broad synopsis of state of the art mathematical methods used in modeling the interaction between tumors and the immune system These papers were presented at the four day workshop on Mathematical Models of Tumor Immune System Dynamics held in Sydney Australia from January 7th to January 10th 2013 The workshop brought together applied mathematicians biologists and clinicians actively working in the field of cancer immunology to share their current research and to increase awareness of the innovative mathematical tools that are applicable to the growing field of cancer immunology Recent progress in cancer immunology and advances in immunotherapy suggest that the immune system plays a fundamental role in host defense against tumors and could be utilized to prevent or cure cancer Although theoretical and experimental studies of tumor

immune system dynamics have a long history there are still many unanswered questions about the mechanisms that govern the interaction between the immune system and a growing tumor The multidimensional nature of these complex interactions requires a cross disciplinary approach to capture more realistic dynamics of the essential biology The papers presented in this volume explore these issues and the results will be of interest to graduate students and researchers in a variety of fields within mathematical and biological sciences
