Williams, 2012-12-06 The hardest data for managers and engineers in charge of the design and implementation of robot systems to acquire is also the most valuable case studies detailing best current practice and the return on investment actually achieved It has been a major goal of the British Robot Association among other professional groups to organise meetings where such case studies are presented and discussed between members but the obvious restrictions of commercial confidentiality lead to considerable difficulty especially in relation to the best recent installations The authors of this book have been in the uniquely privileged position of lecturing in the Cambridge University Production Engineering Tripos a course specially organised in conjunction with a number of leading companies applying robots and automation Actual case studies from these companies form an important part of the course making this book that has emerged from it a uniquely important addition to our Open University Press series **Architecture and Design for Industry 4.0** Maurizio

Barberio, Micaela Colella, Angelo Figliola, Alessandra Battisti, 2023-10-06 This book collects contributions of forefront research and practices related to the use of the enabling technologies of Industry 4.0 in the architecture and design fields and their impact on the UN's Sustainable Development goals The book is structured into three sections research practice and technologies with the goal of creating a new framework useful for widespread awareness necessary to initiate technology transfer processes for the benefit of the public sector universities research centers and innovative companies and a new professional figure capable of controlling the entire process is essential Thus the book chapters arouse a series of relevant topics such as computational and parametric design performance based architecture data driven design strategies parametric environmental design and analysis computational and parametric structural design and analysis AI and machine learning BIM and interoperability VR and AR digital and robotic fabrication additive manufacturing and 3D printing R D and entrepreneurship circular architecture and didactics In the post digital era where the essence of design lies in the control and information of the process that holistically involves all the aspects mentioned above rather than in formal research it is necessary to understand technologies and analyze the advantages that they can bring in terms of environmental sustainability and product innovation **Software Engineering for Experimental Robotics** Davide Brugali, 2007-02-15
