Groundwater Environment In Asian Cities Concepts Methods And Case Studies:

Groundwater Environment in Asian Cities Sangam Shrestha, Vishnu Prasad Pandey, Shashidhar Thatikonda, Binaya Raj Shivakoti, 2016-02-11 Groundwater contributes to the sustainable development of many Asian cities by providing water for domestic industrial and agricultural uses and regulating ecosystem flows. However groundwater has not always been properly managed which often has resulted in depletion and degradation of the resource. *Groundwater Environment in Asian Cities* presents the up to date scientific knowledge on groundwater environment in fourteen Asian cities using Driver Pressure State Impact Response DPSIR framework. In detail the book presents the facts and figures of groundwater dependency problems related to groundwater over exploitation implementation of various policy instruments and management practices and their results in selected fourteen Asian cities namely Bandung Indonesia Bangkok Thailand Beijing China Bishkek Kyrgyzstan Chitwan Nepal Delhi India Dili East Timor Ho Chi Minh Vietnam Hyderabad India Khulna Bangladesh Lahore Pakistan Seoul South Korea Tokyo Japan and Yangon Myanmar. The book provides the one step platform to get sufficient details about groundwater aquifers hydrogeology groundwater status impacts on groundwater environment and responses technology policy institutional etc deployed in the case studies cities and therefore provides a snap shot of Asian groundwater environments. The theoretical background of the topics discussed along with the case studies help the readers understand the similarities and differences about the status of groundwater development and use in each city. In addition the information in the book will serve as a baseline for other research such as mitigation of groundwater related problems e.g. land subsidence impact of climate change on groundwater and importance of groundwater for implementing sustainable development goals in future. Presents a framework for evaluating groundwater environment in urban environments. Includes case studies and local examples from a broad geographical range of urban environments from virtually every region in Asia including Bandung Bangkok Delhi Bishkek Beijing and Tokyo. The book will be a valuable resource for groundwater adversaries in the scientific decision making and end user communities particularly for understanding and assessing state of groundwater resources in the region as well as learning from the responses practiced so far. Dr Linda Anne Stevenson APN. The contents in this book are very much useful for informed decision making for protecting groundwater environment and therefore contributes in making invisible visible. Dr Neno Kukuric IGRAC. With concrete examples and lessons for readers this book responds to the call for comprehensive research and studies the implementation of new science based methodologies and endorsement of principles for groundwater resources management and cities. Dr Aureli Alice UNESCO IHP. As a Regional Hub for Groundwater Management in the Asia Pacific Region IGES finds this book as a very much useful reference for knowledge hub partners groundwater managers academic institutions research scholars and international organizations working in the areas of groundwater in Asia and beyond. Dr Hideyuki Mori IGES.

GIS and Geostatistical Techniques for Groundwater Science Senapathi Venkatramanan, Prasanna Mohan

Viswanathan, Sang Yong Chung, 2019-05-28 GIS and Geostatistical Techniques for Groundwater Science provides a detailed synthesis of the application of GIS and geostatistics in groundwater studies. As the book illustrates, GIS can be a powerful tool for developing solutions for water resource problems, assessing water quality and managing water resources. Beginning with an introduction to the history of GIS and geostatistical techniques in groundwater studies, the book then describes various spatial techniques, including case studies for various applications from quality assessment to resource management. This book assembles the most up-to-date techniques in GIS and geostatistics as they relate to groundwater, one of our most important natural resources. Provides details on the application of GIS and statistics in groundwater studies. Includes practical coverage of the use of spatial analysis techniques in groundwater science. Bridges the gap between geostatistics and GIS as it relates to groundwater science and management. Offers worldwide case studies to illustrate various techniques and applications in addressing groundwater issues.

Emerging Issues in the Water Environment during Anthropocene Manish Kumar, Daniel D. Snow, Ryo Honda, 2019-08-28 This book intends to bring together and integrate the subject matter of water quality. The book covers aspects of water related to climate change, emerging aspects of engineering sciences, biogeochemical sciences, hydrogeochemistry, river management and morphology, social sciences and public policy. The book covers the role of disruptive innovations in water management, policy formation and impact mitigation strategies. The book includes lab results as well as case studies. It provides recommendations and solutions for policy making and sustainable water management. The chapters in this book deal cohesively with many aspects of the water environment during the Anthropocene era. The contents cover myriad issues such as land degradation, water scarcity, urbanization, climate change and disruptive innovation. The book also discusses issues highly pertinent to society and sustainability such as the prevalence of enteric viruses and pharmaceutical residues as possible anthropogenic markers in the aquatic environment. The book will prove useful for students, professionals and researchers working on various aspects of water-related concerns.

Groundwater of South Asia Abhijit Mukherjee, 2018-06-01 This book presents recent findings from the South Asian region, SA, broadly including groundwater studies on a quantity b exploration c quality and pollution d economics management and policies e groundwater and society and f sustainable sources. It offers a compilation of compelling, authentic insights into groundwater scenarios throughout the water-stressed South Asia region. Comprising Afghanistan, Bangladesh, Bhutan, India, Myanmar, Nepal, Pakistan and Sri Lanka, it is the most densely populated region in the world. It occupies approximately 4% of the global land area but supports more than 25% of the global population. The SA region now faces an acute shortage of fresh water due to a rapid rise in water demand and changes in societal water use patterns. Combining essential advances and perspectives, this book offers a valuable resource for all scientists, planners and policymakers who are interested in understanding and developing the SA and other related areas.
