　　<u>The Q-Schur Algebra</u> Stephen Donkin,1998-12-10 This book focuses on the representation theory of q Schur algebras and connections with the representation theory of Hecke algebras and quantum general linear groups The aim is to present from a unified point of view quantum analogs of certain results known already in the classical case The approach is largely homological based on Kempf s vanishing theorem for quantum groups and the quasi hereditary structure of the q Schur algebras Beginning with an introductory chapter dealing with the relationship between the ordinary general linear groups and their quantum analogies the text goes on to discuss the Schur Functor and the 0 Schur algebra The next chapter considers Steinberg s tensor product and infinitesimal theory Later sections of the book discuss tilting modules the Ringel dual of the q Schur algebra Specht modules for Hecke algebras and the global dimension of the q Schur algebras An appendix gives a self contained account of the theory of quasi hereditary algebras and their associated tilting modules This

volume will be primarily of interest to researchers in algebra and related topics in pure mathematics   *The Descriptive Set Theory of Polish Group Actions* Howard Becker,A. S. Kechris,1996-12-05 In this book the authors present their research into the foundations of the theory of Polish groups and the associated orbit equivalence relations The particular case of locally compact groups has long been studied in many areas of mathematics Non locally compact Polish groups occur naturally as groups of symmetries in such areas as logic especially model theory ergodic theory group representations and operator algebras Some of the topics covered here are topological realizations of Borel measurable actions universal actions applications to invariant measures actions of the infinite symmetric group in connection with model theory logic actions dichotomies for orbit spaces including Silver Glimm Effros type dichotomies and the topological Vaught conjecture descriptive complexity of orbit equivalence relations definable cardinality of orbit spaces   **Surveys in Combinatorics, 1997** Rosemary Bailey,R. A. Bailey,1997-07-31 This volume contains the invited lectures given at the Sixteenth British Combinatorial Conference held in July 1997 at Queen Mary and Westfield College University of London This biennial conference is a well established international event with speakers from all over the world Contained here is a survey of some of the most important work ever in graph theory with related papers that will be essential background reading to anyone doing research in this field Also included is an illustration of how recent developments in group theory lead to advances in graph theory and an exciting new construction of one of the Mathieu groups Other articles show how to construct a block design and how to use finite geometries An account is given of the computational complexity of counting The book provides a valuable survey of the present state of knowledge in combinatorics It will be useful to research workers and advanced graduate students primarily in mathematics but also in computer science statistics and engineering   **Geometric Group Theory: Volume 2** Graham A. Niblo,Martin A. Roller,1993-08-12 The articles in these two volumes arose from papers given at the 1991 International Symposium on Geometric Group Theory and they represent some of the latest thinking in this area Many of the world s leading figures in this field attended the conference and their contributions cover a wide diversity of topics This second volume contains solely a ground breaking paper by Gromov which provides a fascinating look at finitely generated groups For anyone whose interest lies in the interplay between groups and geometry these books will be an essential addition to their library   **Polynomial Invariants of Finite Groups** D. J. Benson,1993-10-07 This is the first book to deal with invariant theory and the representations of finite groups   *Groups St Andrews 2001 in Oxford: Volume 2* C. M. Campbell,E. F. Robertson,G. C. Smith,2003-11-06 This second volume of the two volume book contains selected papers from the conference Groups St Andrews 2001 in Oxford The articles are contributed by a number of leading researchers and cover a wide spectrum of modern group theory There are articles based on lecture courses given by five main speakers together with refereed survey and research articles The Groups St Andrews proceedings volumes are a snapshot of the state of the art in group theory and they often play an important role in future developments in the subject   <u>Discrete Groups</u>

and Geometry William J. Harvey,C. Maclachlan,1992-07-30 This book constitutes the proceedings of a conference held at the University of Birmingham to mark the retirement of Professor A M Macbeath The papers represent up to date work on a broad spectrum of topics in the theory of discrete group actions ranging from presentations of finite groups through the detailed study of Fuchsian and crystallographic groups to applications of group actions in low dimensional topology complex analysis algebraic geometry and number theory For those wishing to pursue research in these areas this volume offers a valuable summary of contemporary thought and a source of fresh geometric insights **Discrete and Continuous Nonlinear Schrödinger Systems** M. J. Ablowitz,B. Prinari,A. D. Trubatch,2004 In recent years there have been important and far reaching developments in the study of nonlinear waves and a class of nonlinear wave equations which arise frequently in applications The wide interest in this field comes from the understanding of special waves called solitons and the associated development of a method of solution to a class of nonlinear wave equations termed the inverse scattering transform IST Before these developments very little was known about the solutions to such soliton equations The IST technique applies to both continuous and discrete nonlinear Schr dinger equations of scalar and vector type Also included is the IST for the Toda lattice and nonlinear ladder network which are well known discrete systems This book first published in 2003 presents the detailed mathematical analysis of the scattering theory soliton solutions are obtained and soliton interactions both scalar and vector are analyzed Much of the material is not available in the previously published literature

Swinnerton Dyer s mathematical career encompasses more than 60 years work of amazing creativity This volume provides contemporary insight into several subjects in which Sir Peter s influence has been notable and is dedicated to his 75th birthday The opening section reviews some of his many remarkable contributions to mathematics and other fields The remaining contributions come from leading researchers in analytic and arithmetic number theory and algebraic geometry The topics treated include rational points on algebraic varieties the Hasse principle Shafarevich Tate groups of elliptic curves and motives Zagier s conjectures descent and zero cycles Diophantine approximation and Abelian and Fano varieties

    Quantum Groups and Lie Theory Andrew Pressley,2002-01-17 Since its genesis in the early 1980s the subject of quantum groups has grown rapidly By the late 1990s most of the foundational issues had been resolved and many of the outstanding problems clearly formulated To take stock and to discuss the most fruitful directions for future research many of the world s leading figures in this area met at the Durham Symposium on Quantum Groups in the summer of 1999 and this volume provides an excellent overview of the material presented there It includes important surveys of both cyclotomic Hecke algebras and the dynamical Yang Baxter equation Plus contributions which treat the construction and classification of quantum groups or the associated solutions of the quantum Yang Baxter equation The representation theory of quantum groups is discussed as is the function algebra approach to quantum groups and there is a new look at the origins of quantum groups in the theory of integrable systems   **Topics on Riemann Surfaces and Fuchsian Groups** Emilio Bujalance García,A.
