Smith, 2008 For each of the 26 sporadic finite simple groups the authors construct a 2 completed classifying space using a homotopy decomposition in terms of classifying spaces of suitable 2 local subgroups This construction leads to an additive decomposition of the mod 2 group cohomology Spaces of Kleinian Groups Yair N. Combinatorial Methods Vladimir Shpilrain, Alexander Mikhalev, Jie-tai Yu, 2012-11-12 This book is about three seemingly independent areas of mathematics combinatorial group theory the theory of Lie algebras and affine algebraic geometry Indeed for many years these areas were being developed fairly independently Combinatorial group theory the oldest of the three was born in the beginning of the 20th century as a branch of low dimensional topology Very soon it became an important area of mathematics with its own powerful techniques In the 1950s combinatorial group theory started to influence rather substantially the theory of Lie algebras thus combinatorial theory of Lie algebras was shaped although the origins of the theory can be traced back to the 1930s In the 1960s B Buchberger introduced what is now known as Gröbner bases This marked the beginning of a new combinatorial era in commutative algebra It is not very likely that Buchberger was directly influenced by ideas from combinatorial group theory but his famous algorithm bears resemblance to Nielsen's method although in a more sophisticated form

Synthetic Differential Geometry Anders Kock, 2006-06-22 This book first published in 2006 details how limit processes can be represented algebraically
