Handbook Of Ataxia Disorders Handbook Of Ataxia Disorders:

Ataxic Disorders Sankara H. Subramony, Alexandra Dürr, 2011-09-21 This volume's primary goal is to provide a comprehensive understanding of recent developments and advancements in the study of ataxic disorders. Beginning with an examination of the cerebellar region and then progressing to a fresh perspective on the clinical aspects of the various forms of ataxia, this handbook gives clinicians a state-of-the-art reference for the management of the many etiologies and neurological manifestations of ataxic disorders. Clinicians will gain a broader understanding of generative ataxias and the genetic disorders associated with them. In addition, new neurophysiological and imaging techniques are discussed along with an in-depth examination of the treatment and management protocols of ataxic diseases. A volume in the Handbook of Clinical Neurology series, which has an unparalleled reputation as the world's most comprehensive source of information in neurology. International list of contributors including the leading workers in the field. Describes the advances which have occurred in clinical neurology and the neurosciences, their impact on the understanding of neurological disorders and on patient care.

Handbook of Ataxia Disorders Thomas Klockgether, 2000-08-18 This timely reference presents for the first time new findings in molecular genetics that are applicable to the epidemiology, pathogenesis, neuropathology, clinical features, and management of ataxia, bridging the gap between scientific and clinical practice. Organized by the distinctive ataxia disorders, their pathogenesis, and management, facilitating quick and efficient diagnoses. Providing complementary sections on the anatomy of the spinocerebellar system, its normal function, and a history of ataxia research and management, the Handbook of Ataxia Disorders clarifies the impact of identifying the molecular causes of ataxia, offers in-depth analysis of dominant and recessive and nonhereditary ataxia disorders, explores the vital connection between the genotypes and phenotypes of various degenerative ataxia disorders, and more. Written by more than 60 international experts and supplemented with over 2600 literature references, photographs, micrographs, drawings, and tables, the Handbook of Ataxia Disorders is an essential and useful reference for clinical neurologists and neuropathologists, neuropsychiatrists, geneticists, physiatrists, and medical school students in these disciplines.

Peripheral Nerve Disorders José Berciano, Antonio García, Jon Infante, 2013-08-17 Hereditary ataxias HA encompass an increasing number of degenerative disorders characterized by progressive cerebellar ataxia usually accompanied by extracerebellar semeiology including peripheral nerve involvement Classically HA were classified according to their pathological hallmark comprising three main forms 1 spinal form predominantly with degeneration of spinocerebellar tracts posterior columns and pyramidal tracts Friedreich's ataxia FA 2 olivopontocerebellar atrophy OPCA and 3 cortical cerebellar atrophy CCA In the 1980s Harding proposed a clinico genetic classification based upon age of onset modality of transmission and clinical semeiology The main categories in this classification were as follows 1 early onset cerebellar ataxia EOCA with age of onset below 25 years and usually with autosomal recessive AR transmission this group encompasses FA and syndromes different from FA 2 autosomal dominant cerebellar ataxia ADCA with adult onset and with either cerebellar plus syndrome or pure cerebellar semeiology and 3 idiopathic late onset onset cerebellar ataxia ILOCA With the advent of molecular genetics the nosology of HA has been in a state of constant flux At present EOCA comprises at least 17 genotypes designated with the acronym of ARCA derived from AR cerebellar ataxia whereas under the umbrella of ADCA 30 genotypes have been reported In this chapter we will review peripheral nerve involvement in classical pathological entities OPCA and CCA ARCA ADCA and ILOCA paying special attention to the most prevalent syndromes in each category As a general rule nerve involvement is relatively common in any form of ataxia except ILOCA the most common pattern being either sensory or sensorimotor neuronopathy with a dying back process An exception to this rule is AR spastic ataxia of Charlevoix Saguenay where nerve conduction studies show the characteristic pattern of intermediate neuropathy implying that sarsin mutation
