Pelton, Firooz Allahdadi, 2015-04-27 Covers in a comprehensive fashion all aspects of cosmic hazards and possible strategies for contending with these threats through a comprehensive planetary defense strategy This handbook brings together in a single reference work a rich blend of information about the various types of cosmic threats that are posed to human civilization by asteroids comets bolides meteors solar flares and coronal mass ejections cosmic radiation and other types of threats that are only recently beginning to be understood and studied such as investigation of the cracks in the protective shield provided by the Van Allen belts and the geomagnetosphere of matter antimatter collisions orbital debris and radiological or biological contamination Some areas that are addressed involve areas about which there is a good deal of information that has been collected for many decades by multiple space missions run by many different space agencies observatories and scientific researchers Other areas involving research and studies that have only recently gotten underway are discussed by some of the world's foremost experts in each of these areas who provide up to date and scientifically verifiable information Although much of the work in these various areas have been conducted by space agencies an expanding range of work is also being carried out by observatories by universities and other research centers and even by private foundations and professional organizations The purpose of this work is thus several fold to include the latest information and most systematic research from around the world in a single reference work to note where there are significant gaps in knowledge where new research spacecraft observatories or other initiatives are needed to fill in critical missing information and to give the best possible information about preventative actions that might be taken against cosmic threats and identify various alternative strategies that are now under way or planned to cope with these various threats **Handbook of cosmic hazards and planetary defence, volume 2**, 2015

Planetary Defense Nikola Schmidt, 2018-12-26 Planetary defense from near Earth objects such as asteroids is a far more nuanced and challenging topic than it might seem Each day technology is making it easier to detect asteroid impact threats in advance but at present there is still no easy way to design and implement any form of global defense This book examines how various asteroid deflection methods can change global political affairs The authors believe that the final policy for potential Earth impacts should be based on practical engineering solutions and innovative architectural structures while at the same time reflecting the most recent political science contributions in ethical security studies and security cosmopolitanism Their focus is not limited to effective engineering solutions but rather extends to how such proposals resonate in possible political structures of the future Planetary defense cannot be achieved with technology alone the chapters in this volume highlight the issues that arise when space science and technology intersect with political science This complex interdisciplinary project not only demands global participation and collaboration but also proposes the way we can achieve it The authors explore various concepts of governance and their far reaching implications for planetary defense and

vice versa how scientific progress in Solar System observations and asteroid collision engineering influence political science and put pressure on the international legal framework The text is intentionally written for a diverse scholarly and diplomatic audience in a style accessible to non specialists and practitioners and can be read by those across diverse disciplinary backgrounds
