General and Specific Mental Abilities Dennis J. McFarland, 2020-05-07 The history of testing mental abilities has seen the dominance of two contrasting approaches psychometrics and neuropsychology These two traditions have different theories and methodologies but overlap considerably in the tests they use Historically psychometrics has emphasized the primacy of a general factor while neuropsychology has emphasized specific abilities that are dissociable This issue about the nature of human mental abilities is important for many practical concerns Questions such as gender ethnic and age related differences in mental abilities are relatively easy to address if they are due to a single dominant trait Presumably such a trait can be measured with any collection of complex cognitive tests If there are many specific mental abilities these would be much harder to measure and associated social issues would be more difficult to resolve The relative importance of general and specific abilities also has implications for educational practices This book includes the diverse opinions of experts from several fields including psychometrics neuropsychology speech language and hearing and applied psychology
