Handbook of Computational Finance Jin-Chuan Duan, Wolfgang Karl Härdle, James E. Gentle, 2011-10-25 Any financial asset that is openly traded has a market price Except for extreme market conditions market price may be more or less than a fair value Fair value is likely to be some complicated function of the current intrinsic value of tangible or intangible assets underlying the claim and our assessment of the characteristics of the underlying assets with respect to the expected rate of growth future dividends volatility and other relevant market factors Some of these factors that affect the price can be measured at the time of a transaction with reasonably high accuracy Most factors however relate to expectations about the future and to subjective issues such as current management corporate policies and market environment that could affect the future financial performance of the underlying assets Models are thus needed to describe the stochastic factors and environment and their implementations inevitably require computational finance tools Handbook of Computational Statistics James E. Gentle, Wolfgang Karl Härdle, Yuichi Mori, 2012-07-06 The Handbook of Computational Statistics Concepts and Methods second edition is a revision of the first edition published in 2004 and contains additional comments and updated information on the existing chapters as well as three new chapters addressing recent work in the field of computational statistics This new edition is divided into 4 parts in the same way as the first edition It begins with How Computational Statistics became the backbone of modern data science Ch 1 an overview of the field of Computational Statistics how it emerged as a separate discipline and how its own development mirrored that of hardware and software including a discussion of current active research The second part Chs 2 15 presents several topics in the supporting field of statistical computing Emphasis is placed on the need for fast and accurate numerical algorithms and some of the basic methodologies for transformation database handling high dimensional data and graphics treatment are discussed The third part Chs 16 33 focuses on statistical methodology Special attention is given to smoothing iterative procedures simulation and visualization of multivariate data Lastly a set of selected applications Chs 34 38 like Bioinformatics Medical Imaging Finance Econometrics and Network Intrusion Detection highlight the usefulness of computational statistics in real world applications Handbook of Computational Finance Jin-Chuan Duan, Wolfgang Karl Härdle, James E. Topological Methods in Data Analysis and Visualization II Ronald Peikert, Helwig Hauser, Hamish Carr, Raphael Fuchs, 2012-01-10 When scientists analyze datasets in a search for underlying phenomena patterns or causal factors their first step is often an automatic or semi automatic search for structures in the data Of these feature extraction methods topological ones stand out due to their solid mathematical foundation Topologically defined structures as found in scalar vector and tensor fields have proven their merit in a wide range of scientific domains and scientists have found them to be revealing in subjects such as physics engineering and medicine Full of state of the art research and contemporary hot topics in the subject this volume is a selection of peer reviewed papers originally presented at the fourth Workshop on Topology Based Methods in Data Analysis and Visualization TopoInVis 2011 held in Zurich Switzerland The workshop brought together many of the leading lights in the field for a mixture of formal presentations and discussion One topic currently generating a great deal of interest and explored in several chapters here is the search for topological structures in time dependent flows and their relationship with Lagrangian coherent structures Contributors also focus on discrete topologies of scalar and vector fields and on persistence based simplification among other issues of note The new research results included in this volume relate to all three key areas in data analysis theory algorithms and applications

American-Type Options Dmitrii S. Silvestrov, 2013-11-27 The book gives a systematical presentation of stochastic approximation methods for models of American type options with general pay off functions for discrete time Markov price processes Advanced methods combining backward recurrence algorithms for computing of option rewards and general results on convergence of stochastic space skeleton and tree approximations for option rewards are applied to a variety of models of multivariate modulated Markov price processes The principal novelty of presented results is based on

consideration of multivariate modulated Markov price processes and general pay off functions which can depend not only on price but also an additional stochastic modulating index component and use of minimal conditions of smoothness for transition probabilities and pay off functions compactness conditions for log price processes and rate of growth conditions for pay off functions The book also contains an extended bibliography of works in the area This book is the first volume of the comprehensive two volumes monograph The second volume will present results on structural studies of optimal stopping domains Monte Carlo based approximation reward algorithms and convergence of American type options for autoregressive and continuous time models as well as results of the corresponding experimental studies **Handbook of Big Data**

Partial Least Squares Structural Equation Modeling Necmi K. Avkiran, Christian M. Ringle, 2018-02-16 This book pulls together robust practices in Partial Least Squares Structural Equation Modeling PLS SEM from other disciplines and shows how they can be used in the area of Banking and Finance In terms of empirical analysis techniques Banking and Finance is a conservative discipline As such this book will raise awareness of the potential of PLS SEM for application in various contexts PLS SEM is a non parametric approach designed to maximize explained variance in latent constructs Latent constructs are directly unobservable phenomena such as customer service quality and managerial competence Explained variance refers to the extent we can predict say customer service quality by examining other

theoretically related latent constructs such as conduct of staff and communication skills Examples of latent constructs at the microeconomic level include customer service quality managerial effectiveness perception of market leadership etc macroeconomic level latent constructs would be found in contagion of systemic risk from one financial sector to another herd behavior among fund managers risk tolerance in financial markets etc Behavioral Finance is bound to provide a wealth of opportunities for applying PLS SEM The book is designed to expose robust processes in application of PLS SEM including use of various software packages and codes including R PLS SEM is already a popular tool in marketing and management information systems used to explain latent constructs Until now PLS SEM has not enjoyed a wide acceptance in Banking and Finance Based on recent research developments this book represents the first collection of PLS SEM applications in Banking and Finance This book will serve as a reference book for those researchers keen on adopting PLS SEM to explain latent constructs in Banking and Finance
