synergetic effect of the two modalities has proved to be of superior didactic value to each modality on its own The highly improved interaction it offers to students as well as direct accessibility to the lecturer adds to the hitherto unparalleled learning outcomes Blended Learning in Engineering Education Recent Developments in Curriculum Assessment and Practice highlights current trends in Engineering Education involving face to face and online curriculum delivery This book will be especially useful to lecturers and postgraduate undergraduate students as well as university administrators who would like to not only get an up to date overview of contemporary developments in this field but also help enhance academic performance at all levels *Learning Objects* Keith Harman,Alex Koohang,2007 <u>Fundamentals of Wireless Communication Engineering Technologies</u> K. Daniel Wong,2011-12-20 A broad introduction to the fundamentals of wireless communication engineering technologies Covering both theory and practical topics Fundamentals of Wireless Communication Engineering Technologies offers a sound survey of the major industry relevant aspects of wireless communication engineering technologies Divided into four main sections the book examines RF antennas and propagation wireless access technologies network and service architectures and other topics such as network management and security policies and regulations and facilities infrastructure Helpful cross references are placed throughout the text offering additional information where needed The book provides Coverage that is closely aligned to the IEEE s Wireless Communication Engineering Technologies WCET certification program syllabus reflecting the author s direct involvement in the development of the program A special emphasis on wireless cellular and wireless LAN systems An excellent foundation for expanding existing knowledge in the wireless field by covering industry relevant aspects of wireless communication Information on how common theories are applied in real world wireless systems With a holistic and well organized overview of wireless communications Fundamentals of Wireless Communication Engineering Technologies is an invaluable resource for anyone interested in taking the WCET exam as well as practicing engineers professors and students seeking to increase their knowledge of wireless communication engineering technologies *The Application of Formal Methods* Simon Foster,Augusto Sampaio,2024-08-31 This Festschrift dedicated to Jim Woodcock contains papers written by many of his closest collaborators After a PhD on software verification at the University of Liverpool Jim has combined a successful career in academia with outstanding industry research in particular he has been a pioneer in applying mathematical modelling approaches in critical industries At GEC s Hirst Research Centre he worked on a novel distributed telephone exchange and a service specification of a PABX exchange In Oxford he collaborated with IBM Hursley Laboratories on modelling of the CICS transaction processing system one of the most significant software systems ever As part of the UK government s cybersecurity strategy he used Z techniques to develop secure office automation systems and a secure version of UNIX He worked with the Smith Institute and BR Research to verify the safety of railway signalling systems approaches developed further in safety critical control systems for the UK Nuclear Installation Inspectorate and British Energy He provided a technically complete theory of correctness for Z verifying

its soundness from first principles and completed the verification of Mondex a smartcard based electronic cash system the first application of a general theory of program correctness to an industrial product He coordinated the experimental work of the Verified Software Initiative an international grand challenge More recently he extended the collection of standard Unifying Theories of Programming UTP with work on object orientation and hybrid systems Currently he is working on a UTP theory of probabilistic programs with application to robotics Jim has been a lecturer research fellow reader and professor at the University of Surrey the University of Oxford the University of Kent and since 2004 the University of York and he is a visiting professor at the Federal University of Pernambuco and Trinity College Dublin He is a Fellow of the Royal Academy of Engineering the British Computer Society and the Formal Methods Europe association and he was part of the team that won the Queen s Award for Technological Achievement in 1992 He is the Editor in Chief of the ACM journal Formal Aspects of Computing he has chaired major related academic conferences and he has contributed to CCITT and Z ISO international standards Throughout all these activities Jim has been a guide and inspiration to colleagues and students and collaborated successfully with researchers in the UK Brazil China France USA Ireland and Singapore Many of these researchers show in their contributions to this volume the ongoing impact of his work   1996 IEEE Real-Time Technology and Applications Symposium Kevin Jeffay,Wei Zhao,1996   Architecture of Computing Systems - ARCS 2012 Andreas Herkersdorf,Kay Römer,Uwe Brinkschulte,2012-02-11 This book constitutes the refereed proceedings of the 25th International Conference on Architecture of Computing Systems ARCS 2012 held in Munich Germany in February March 2012 The 20 revised full papers presented in 7 technical sessions were carefully reviewed and selected from 65 submissions The papers are organized in topical sections on robustness and fault tolerance power aware processing parallel processing processor cores optimization and communication and memory   **IEEE Workshop on Signal Processing Systems** ,1997   *Distributed Real-Time Architecture for Mixed-Criticality Systems* Hamidreza Ahmadian,Roman Obermaisser,Jon Perez,2018-09-05 This book describes a cross domain architecture and design tools for networked complex systems where application subsystems of different criticality coexist and interact on networked multi core chips The architecture leverages multi core platforms for a hierarchical system perspective of mixed criticality applications This system perspective is realized by virtualization to establish security safety and real time performance The impact further includes a reduction of time to market decreased development deployment and maintenance cost and the exploitation of the economies of scale through cross domain components and tools Describes an end to end architecture for hypervisor level chip level and cluster level Offers a solution for different types of resources including processors on chip communication off chip communication and I O Provides a cross domain approach with examples for wind power health care and avionics Introduces hierarchical adaptation strategies for mixed criticality systems Provides modular verification and certification methods for the seamless integration of mixed criticality systems Covers platform technologies along with a methodology for the development process Presents an

experimental evaluation of technological results in cooperation with industrial partners The information in this book will be extremely useful to industry leaders who design and manufacture products with distributed embedded systems in mixed criticality use cases It will also benefit suppliers of embedded components or development tools used in this area As an educational tool this material can be used to teach students and working professionals in areas including embedded systems computer networks system architecture dependability real time systems and avionics wind power and health care systems
