Group Psychology And The Analysis Of The Ego:

Group Psychology and the Analysis of the Ego Sigmund Freud, 1989 To Freud individual and social psychology were virtually identical *GROUP PSYCHOLOGY AND THE ANALYSIS OF THE EGO* Sigmund Freud, 2017-09-18 In this seminal work Freud describes psychological mechanisms at work within mass movements A mass according to Freud is a temporary entity consisting of heterogeneous elements that have joined together for a moment Like Gustav Le Bon Freud says that as part of the mass the individual acquires a sense of infinite power which allows him to act on impulses that he would otherwise have to curb as an isolated individual Sigmund Freud was an Austrian neurologist and the founder of psychoanalysis a clinical method for treating psychopathology through dialogue between a patient and a psychoanalyst

here the essential of this book by the author GROUP PSYCHOLOGY AND THE ANALYSIS OF THE EGO 1921 INTRODUCTION IN THE SPIRITUAL LIFE OF THE INDIVIDUAL THE OTHER COUNTS AS A MODEL AS AN OBJECT AS AN AUXILIARY AND AS AN ENEMY THAT IS WHY FROM THE VERY BEGINNING INDIVIDUAL PSYCHOLOGY IS SIMULTANEOUSLY SOCIAL PSYCHOLOGY The subject's relationships with his parents and siblings with his love object teacher or doctor have the right to be considered social phenomena Thus they come into opposition with other processes called by psychoanalysis narcissistic in which drive satisfaction withdraws from the influence of other people or renounces them Therefore the opposition between social and narcissistic mental acts would belong to the field of individual psychology and could not be separated from social or mass psychology Now when it comes to this type of phenomenon the object of inquiry is the simultaneous influence of a large number of people on an individual who is linked This link is the social drive which leads to integrate him into a people a caste an institution or an organized multitude Group Psychology and the Analysis of the Ego Sigmund Freud, James Strachey, 2024-01-24 In Group Psychology and the Analysis of the Ego 1922 Sigmund Freud based his preliminary description of group psychology on Le Bon's work but went on to develop his own original theory related to what he had begun to elaborate in Totem and Taboo Theodor Adorno reprised Freud's essay in 1951 with his Freudian Theory and the Pattern of Fascist Propaganda and said that It is not an overstatement if we say that Freud though he was hardly interested in the political phase of the problem clearly foresaw the rise and nature of fascist mass movements in purely psychological categories Group Dynamics refers to a system of behaviors and psychological processes occurring within a social group intragroup dynamics or between social groups intergroup dynamics The study of group dynamics can be useful in understanding decision making behavior tracking the spread of diseases in society creating effective therapy techniques and following the emergence and popularity of new ideas and technologies Group dynamics are at the core of understanding racism sexism and other forms of social prejudice and discrimination These applications of the field are studied in psychology sociology anthropology political science epidemiology education social work business and communication studies Within the context of psychology Social Psychology is the scientific study of how people's thoughts feelings and behaviors are influenced by the actual imagined or implied presence of others By this definition scientific refers to the empirical method of investigation The terms thoughts feelings and behaviors include all psychological variables that are measurable in a human being The statement that others presence may be imagined or implied suggests that we are prone to social influence even when no other people are present such as when watching television or following internalized cultural norms Social psychologists typically explain human behavior as a result of the interaction of mental states and immediate social situations In general social psychologists have a preference for laboratory based empirical findings Social psychology theories tend to be specific and focused rather than global and general Social psychologists therefore deal with the factors that lead us to behave in a given way in the presence of others and look at the conditions under which certain behavior

actions and feelings occur Social psychology is concerned with the way these feelings thoughts beliefs intentions and goals are constructed and how such psychological factors in turn influence our interactions with others Social psychology is an interdisciplinary domain that bridges the gap between psychology and sociology During the years immediately following World War II there was frequent collaboration between psychologists and sociologists However the two disciplines have become increasingly specialized and isolated from each other in recent years with sociologists focusing on macro variables e g social structure to a much greater extent Nevertheless sociological approaches to social psychology remain an important counterpart to psychological research in this area In addition to the split between psychology and sociology there has been a somewhat less pronounced difference in emphasis between American social psychologists and European social psychologists As a broad generalization American researchers traditionally have focused more on the individual whereas Europeans have paid more attention to group level phenomena
