Handboek Curriculum Modellen Theorien Technologien:

Tabellenboek wetenschappelijk onderwijs en onderzoek Rijksuniversiteit Groningen, 1993 Model Predictive Control mit MATLAB und Simulink Rainer Dittmar, 2019-12-04

Modellbasierte prädiktive Regelungen dienen der Lösung anspruchsvoller Aufgaben der Mehrgrößenregelung mit Beschränkungen der Stell- und Regelgrößen. Sie werden in der Industrie in vielen Bereichen erfolgreich eingesetzt. Mit der MPC Toolbox™ des Programmsystems MATLAB Simulink steht ein Werkzeug zur Verfügung, das sowohl in der industriellen Praxis als auch an Universitäten und Hochschulen verwendet wird. Das vorliegende Buch gibt einen Überblick über die Grundideen und Anwendungsvorteile des MPC-Konzepts. Es zeigt, wie mit Hilfe der Toolbox MPC-Regelungen entworfen, eingestellt und simuliert werden können. Ausgewählte Beispiele aus dem Bereich der Verfahrenstechnik demonstrieren mögliche Vorgehensweisen und vertiefen das Verständnis. Das Buch richtet sich an in der Industrie tätige Ingenieure, die MPC-Regelungen planen, entwickeln und betreiben, aber auch an Studierende technischer Fachdisziplinen, die in das Arbeitsgebiet MPC einsteigen wollen.

Model Predictive Control (MPC) is used to solve challenging multivariable constrained control problems. MPC systems are successfully applied in many different branches of industry. The MPC Toolbox™ of MATLAB Simulink provides powerful tools for industrial MPC application, but also for education and research at technical universities. This book gives an overview of the basic ideas and advantages of the MPC concept. It shows how MPC systems can be designed, tuned, and simulated using the MPC Toolbox. Selected process engineering benchmark examples are used to demonstrate typical design approaches and help deepen the understanding of MPC technologies. The book is aimed at engineers in industry interested in the development and application of MPC systems, as well as students of different technical disciplines seeking an introduction into this field.

ALAN J BISHOP Monash University Clayton Victoria Australia

RATIONALE Mathematics Education is becoming a well-documented field with many books, journals, and international conferences focusing on a variety of aspects relating to theory, research, and practice. That documentation also reflects the fact that the field has expanded enormously in the last twenty years. At the 8th International Congress on Mathematics Education (ICME) in Seville, Spain, for example, there were 26 specialist Working Groups and 26 specialist Topic Groups, as well as a host of other group activities. In 1950, the Commission Internationale pour l'Etude et l'Amélioration de l'Enseignement des Mathématiques (CIEAEM) was formed, and twenty years ago another active group, the International Group

for the Psychology of Mathematics Education PME began at the third ICME at Karlsruhe in 1976 Since then several other specialist groups have been formed and are also active through regular conferences and publications as documented in Edward Jacobsen s Chapter 34 in this volume

Application of Structural Equation Modeling in Educational Research and Practice Myint Swe Khine, 2013-10-30 Structural Equation Modeling SEM is a statistical approach to testing hypothesis about the relationships among observed and latent variables The use of SEM in research has increased in psychology sociology and economics in recent years In particular educational researchers try to obtain the complete image of the process of education through the measurement of personality differences learning environment motivation levels and host of other variables that affect the teaching and learning process With the use of survey instruments and interviews with students teachers and other stakeholders as a lens educators can assess and gain valuable information about the social ecology of the classrooms that could help in improving the instructional approach classroom management and the learning organizations A considerable number of research have been conducted to identify the factors and interactions between students characteristics personal preferences affective traits study skills and various other factors that could help in better educational performance In recent years educational researchers use Structural Equation Modeling SEM as a statistical technique to explore the complex and dynamic nature of interactions in educational research and practice SEM is becoming a powerful analytical tool and making methodological advances in multivariate analysis This book presents the collective works on concepts methodologies and applications of SEM in educational research and practice The anthology of current research described in this book will be a valuable resource for the next generation educational practitioners
