Characterization of Cereals and Flours Gonul Kaletunc, Kenneth J. Breslauer, 2019-07-17 Characterization of Cereals and Flours is a state of the art reference that details the latest advances to characterize the effects of manufacturing processes and storage conditions on the thermal mechanical and structural properties of cereal flours and their products examining the influence of moisture absorption storage temperature baking and extrusion processing on flour and cereal

product texture shelf life and quality The book discusses the influence of additives on pre and postprocessed food biopolymers the development of databases and construction of state diagrams to illustrate the state and function of cereal flours before during and after production and the current techniques in image analysis light and electron microscopy and NMR spectroscopy used to analyze the microstructure of cereal products It also discusses the methods used to optimize processing parameters and formulations to produce end products with desirable sensory and textural properties the shelf life of cereal products and the relationships between the sensory and physical characteristics of cereal foods *Handbook of Food Processing Equipment* George D. Saravacos, Athanasios E. Kostaropoulos, 2012-12-06 Recent publications in food engineering concern mainly food process engineering which is related to chemical engineering and deals primarily with unit operations and unit processes as applied to the wide variety of food processing operations Relatively less attention is paid to the design and operation of food processing equipment which is necessary to carry out all of the food processes in the food plant Significant technical advances on processing equipment have been made by the manufacturers as evidenced by the efficient modern food processing plants There is a need to relate advances in process engineering to process equipment and vice versa This book is an attempt to apply the established principles of transport phenomena and unit operations to the design selection and operation of food processing equipment Since food processing equipment is still designed empirically due to the complexity of the processes and the uncertainty of food properties description of some typical industrial units is necessary to understand the operating characteristics Approximate values and data are used for illustrative purposes since there is an understandable lack of published industrial data
