The Practitioner's Guide to Psychoactive Drugs Alan J. Gelenberg, Ellen L. Bassuk, 2013-03-07 Once again in their new edition of a classic American handbook of clinical psycho pharmacology Drs Gelenberg and Bassuk and their colleagues have produced a master work of sound clinical guidelines for the use of medicines as an increasingly central component of contemporary psychiatric practice They have recruited an outstanding panel of coauthors but have managed to maintain a high level of consistency of quality and style throughout the many chapters on specific classes of psychiatric illnesses and their corresponding treatments The book continues to encapsulate the clinically relevant essentials of the pharmacology of each major class of psychotropic agents in a way that clinicians can easily grasp Moreover it provides sound and carefully considered specific guidelines to diagnosis drug selection and dosing and patient assessment with particularly rich presentations on the recognition and management of adverse effects Inclusion of chapters on pediatric and geriatric populations and on topics pertaining to substance abuse disorders and medicolegal aspects of the field are unusual in books of this kind and so are particularly valuable Students and trainees will appreciate the handbook's well organized and readable style and practicing clinicians should be satisfied with its balanced consideration of older standard treatments as well as the latest medicines and trends in clinical psychopharmacology with glimpses into future developments

Superintendent of Documents, 1968 *Florida Administrative Weekly*, 2005 *Handbook of Research in Pediatric and Clinical Child Psychology* Dennis Drotar, 2013-11-11 The professional development of researchers is critical for the future development of the fields of pediatric and clinical child psychology In order to conduct research in pediatric and clinical child psychology researchers need to work with a wide range of populations and master an increasingly wide range of skills many of which are either not formally taught or considered in sufficient depth in clinical training Such skills include the development of resources for research by writing grants to government agencies and foundations skills in preparing research for publications concerning original research review articles or case reports scientific presentation skills the ability to review and edit scientific manuscripts and to implement and manage research in applied settings Moreover the increasing complexity of research in pediatric and clinical child psychology requires successful researchers in these fields to develop their expertise with a wide range of new specialized methodologies data analytic methods models of data analysis and methods of assessment Finally to enhance the relevance of their research to practice researchers in pediatric and clinical child psychology need to integrate their work with clinical service delivery programs that are based on empirical research

The necessity to train researchers in pediatric and clinical child psychology in such multifaceted knowledge and skills places extraordinary burdens on professional training programs. Professional researchers in pediatric and clinical psychology also are challenged to develop new knowledge and skills through continuing education and faculty development programs.

The Practitioner's Guide to Psychoactive Drugs Ellen L. Bassuk, Stephen C. Schoonover, Alan J. Gelenberg, 2012-12-06. Books like people are born and if they survive the trauma of birth mature in response to a changing environment. This volume is no exception. It immediately proved its usefulness to psychiatric clinicians upon its publication six years ago and it is not surprising to find it now entering a new phase of life in a second edition. The many and significant changes that the reader will find herein reflect not only the rapid growth of knowledge in the field of psychopharmacology but also the editors' wise awareness of the need to incorporate that knowledge into clinical practice. Important new sections have been added on the management of elderly patients, on the pharmacological approach to those with temporal lobe epilepsy, and on the use of psychoactive medications during pregnancy. The existing clinical sections have been expanded and the format has been altered to make the volume more practically useful for the harried clinician. Most important of all, the discussions of individual drugs have been carefully revised to update information about those medications that have stood the test of time and to include those newer pharmacological agents that have appeared on the clinical scene since the publication of the first edition. This last task has been significantly aided by the addition of Dr. Alan J. Gelenberg to the family of editors; his clinical and scientific knowledge nicely complements that of Drs. Bassuk and Schoonover and its influence is evident throughout.
