Handbook of Research on Teaching Virginia Richardson, 2001 **Beyond Classical Pedagogy** Terry Wood, Barbara Scott Nelson, Janet E. Warfield, 2014-04-04 The emergence of the National Council of Teachers of Mathematics Standards in 1989 sparked a sea change in thinking about the nature and quality of mathematics instruction in U S schools Much is known about transmission forms of mathematics teaching and the influence of this teaching on students learning but there is still little knowledge about the alternative forms of instruction that have evolved from the recent widespread efforts to reform mathematics education Beyond Classical Pedagogy Teaching Elementary School Mathematics reports on the current state of knowledge about these new instructional practices which differ in significant ways from the traditional pedagogy that has permeated mathematics education in the past This book provides a research based view of the nature of facilitative teaching in its relatively mature form along with opposing views and critique of this form of pedagogy The focus is on elementary school mathematics classrooms where the majority of the reform based efforts have occurred and on the micro level of teaching classroom interaction as a source for revealing the complexity involved in teaching teachers learning and the impact of both on children s learning The work in elementary mathematics teaching is situated in the larger

context of research on teaching Research and insights from three disciplinary perspectives are presented the psychological perspective centers on facilitative teaching as a process of teachers learning the mathematical perspective focuses on the nature of the mathematical knowledge teachers need in order to engage in this form of teaching the sociological perspective attends to the interactive process of meaning construction as teachers and students create intellectual communities in their classrooms The multidisciplinary perspectives presented provide the editors with the necessary triangulation to provide confirming evidence and rich detail about the nature of facilitative teaching Audiences for this book include scholars in mathematics education and teacher education teacher educators staff developers and classroom teachers It is also appropriate as a text for graduate courses in mathematics education teacher education elementary mathematics teaching methods and methods of research in mathematics education

Theorizing Teaching Anna-Katharina

Praetorius,Charalambos Y. Charalambous,2023-03-11 This open access book seeks to create a forum for discussing key questions regarding theories on teaching Which theories of teaching do we have What are their attributes What do they contain How are they generated How context sensitive and content specific do they need to be Is it possible or even desirable to develop a comprehensive theory of teaching The book identifies areas of convergence and divergence among the answers to these questions by prominent international scholars in research on teaching Initiating exchanges among the authors it then evaluates whether consensus can be reached on the areas of divergence The book concludes by discussing lessons learned from this endeavor and outlines steps that need to be taken for advancing future work on theorizing teaching As such the book is aimed at readers interested in an overview of the theorizing of teaching and key open questions that if addressed help to move the field forward

Cultivating High-Quality Teaching Through Induction and Mentoring Carol A. Bartell,2005

Teacher and Student Evaluation Alyson Leah Lavigne,Thomas L. Good,2013-09-05

Following the recent major school reform of Race to the Top schools teachers and students are increasingly evaluated through high stakes achievement test scores In six concise chapters Teacher and Student Evaluation explores the historical rise and modern landscape of accountability in American education and the current models of teacher evaluation The authors provide realistic and useful suggestions for responding to current accountability demands The authors explore the methodological concerns and policy implications of using value added and observational measures to make high stakes decisions After reaching the conclusion that these contemporary evaluation practices are flawed Alyson Lavigne and Thomas Good offer possible solutions that inform current and future teacher evaluation This book is a valuable resource for students of educational assessment as well as policy makers administrators and teachers who are currently building accountability plans The book is written in an accessible but authoritative fashion that practitioners policymakers and scholars will find useful

Teaching History for the Common Good Keith C.

Barton, Linda S. Levstik, 2004-07-13 In *Teaching History for the Common Good* Barton and Levstik present a clear overview of competing ideas among educators historians politicians and the public about the nature and purpose of teaching history and they evaluate these debates in light of current research on students historical thinking In many cases disagreements about what should be taught to the nation s children and how it should be presented reflect fundamental differences that will not easily be resolved A central premise of this book though is that systematic theory and research can play an important role in such debates by providing evidence of how students think how their ideas interact with the information they encounter both in school and out and how these ideas differ across contexts Such evidence is needed as an alternative to the untested assumptions that plague so many discussions of history education The authors review research on students historical thinking and set it in the theoretical context of mediated action an approach that calls attention to the concrete actions that people undertake the human agents responsible for such actions the cultural tools that aid and constrain them their purposes and their social contexts They explain how this theory allows educators to address the breadth of practices settings purposes and tools that influence students developing understanding of the past as well as how it provides an alternative to the academic discipline of history as a way of making decisions about teaching and learning the subject in schools Beyond simply describing the factors that influence students thinking Barton and Levstik evaluate their implications for historical understanding and civic engagement They base these evaluations not on the disciplinary study of history but on the purpose of social education preparing students for participation in a pluralist democracy Their ultimate concern is how history can help citizens engage in collaboration toward the common good In *Teaching History for the Common Good* Barton and Levstik discuss the contribution of theory and research explain the theory of mediated action and how it guides their analysis and describe research on children s and adults knowledge of and interest in history lay out a vision of pluralist participatory democracy and its relationship to the humanistic study of history as a basis for evaluating the perspectives on the past that influence students learning explore four principal stances toward history identification analysis moral response and exhibition review research on the extent to which children and adolescents understand and accept each of these and examine how the stances might contribute to or detract from participation in a pluralist democracy address six of the principal tools of history narrative structure stories of individual achievement and motivation national narratives inquiry empathy as perspective taking and empathy as caring and review research and conventional wisdom on teachers knowledge and practice and argue that for teachers to embrace investigative multi perspectival approaches to history they need more than knowledge of content and pedagogy they need a guiding purpose that can be fulfilled only by these approaches and preparation for participatory democracy provides such purpose *Teaching History for the Common Good* is essential reading for history and social studies professionals researchers teacher educators and students as well as for policymakers parents and members of the general public who are interested in history education or in students thinking and learning about the

subject **Historical Thinking** Sam Wineburg, 2001-03 Since ancient times the pundits have lamented young people's lack of historical knowledge and warned that ignorance of the past surely condemns humanity to repeating its mistakes. In the contemporary United States this dire outlook drives a contentious debate about what key events nations and people are essential for history students. Sam Wineburg says that we are asking the wrong questions. This book demolishes the conventional notion that there is one true history and one best way to teach it. Although most of us think of history and learn it as a conglomeration of facts, dates, and key figures, for professional historians it is a way of knowing, a method for developing and understanding about the relationships of peoples and events in the past. A cognitive psychologist, Wineburg has been engaged in studying what is intrinsic to historical thinking, how it might be taught, and why most students still adhere to the one damned thing after another concept of history. Whether he is comparing how students and historians interpret documentary evidence or analyzing children's drawings, Wineburg's essays offer rough maps of how ordinary people think about the past and use it to understand the present. Arguing that we all absorb lessons about history in many settings, in kitchen table conversations, at the movies, or on the world wide web, for instance, these essays acknowledge the role of collective memory in filtering what we learn in school and shaping our historical thinking. *Growing as a Teacher* Clive Beck, Clare Kosnik, 2014-05-12 Teacher learning doesn't end with initial preparation; many insights and skills remain to be added. This book is concerned with ongoing teacher learning, its goals, Part I, and pathways, Part II. It is based on a longitudinal study of 42 teachers: 20 over their first 8 years of teaching and 22 over their first 5 years. The areas of continued teacher learning identified in our study were vision of teaching, program planning, assessment, relevance, subject content, and pedagogy, classroom organization, and community inclusion and professional identity. The pathways of learning included informal and formal PD, teacher inquiry, and school-based learning. A key finding of our research was that over the years teachers learn a great deal informally. However, they do so largely on their own and under considerable stress. Teachers need more support than they currently receive, both for survival and to enhance their informal learning. Teachers can benefit significantly from external input, but their everyday learning makes them key experts in teaching. Accordingly, PD providers should work with teachers, utilizing their existing knowledge. This book is written for consideration by teachers, student teachers, teacher educators, PD providers, policy developers, and others interested in facilitating teacher learning. Some of us have been writing somewhat desperately on these ideas for years. Beck and Kosnik have given us strong evidence that the ideas are effective in practice. I hope this persuasive and beautifully written book will be widely read. Nel Noddings, Lee Jacks, Professor of Education Emerita, Stanford University. This book makes a powerful case for taking teachers' professional development seriously. It brings us the voices of beginning teachers as they deepen their professional knowledge over time and makes clear the depth of commitment they bring to the job. Sanger, Richard D. Osguthorpe, 2015-04-25 What makes teaching a moral endeavor How can we prepare classroom practitioners for engaging in that moral endeavor in meaningful and effective ways This volume brings together leading scholars who draw upon both their academic expertise and substantial wisdom of practice to offer a variety of perspectives on the challenge of preparing today's teachers for the moral work of teaching Book Features Examines the role that teacher preparation and development can play in addressing the moral work of teaching Highlights the work of leading scholars from educational psychology educational philosophy and teacher education Provides compelling insights for identifying the next generation of our nation's best teachers Contributors Wolfgang Althof Karen D Benson Marvin W Berkowitz Donald Blumenfeld Jones Elizabeth Campbell Julie Canniff Mary Crawford Lana Daly Rebecca Evers Cathie Fallona Gary Fenstermacher Anthony Holter Lisa E Johnson Daniel Lapsley Darcia Narvaez Virginia Navarro Larry Nucci Joy Pelton Virginia Richardson Don Senneville David Shields Barbara Stengel Jonatha W Vare Marilyn Watson Matthew Sanger is associate professor of Educational Foundations in the College of Education at Idaho State University Richard Osguthorpe is associate professor and chair of the Department of Curriculum Instruction and Foundational Studies at Boise State University The editors and contributors help us appreciate that many teachers come to the work precisely because of abiding moral commitments to help others to make a difference in the lives of the young to give something back to society But they also help us see how crucial it is to give candidates systematic support in coming to grips with the meaning of these commitments and how to translate them into pedagogical action for the well being of students and society alike From the Foreword by David T Hansen This book sheds light into the core of professional morality It should be a must for each student teacher and for each practitioner around school life Fritz Oser professor of education and educational psychology University of Fribourg Switzerland Lest we forget that teaching is inherently moral work Sanger and Osguthorpe explain what this means for teachers and teacher educators The combination of conceptual analysis and cases of teacher education practice make this book a valuable resource and welcome antidote to the current preoccupation with test scores Sharon Feiman Nemser Brandeis University **Handbook of Complementary Methods in Education Research** Judith L. Because Teaching Matters Marleen C. Pugach, 2009-01-06 Real challenges Real choices And very real consequences That's what today's classrooms are about That's why Marleen Pugach's *Because Teaching Matters* An Introduction to the Profession 2e is

all about depicting today's classrooms as they truly are while at the same time highlighting the enormous impact teachers have on students' lives. Organized around five professional commitments from learning from multiple sources of knowledge using the curriculum responsibly and embracing diversity to meeting the needs of individual students and contributing actively to the profession. Because *Teaching Matters: An Introduction to the Profession 2e* tells the true story of today's complex classrooms. But there's more. It also drives home that though the decision to teach is a serious one, it is one that can be extremely rewarding. Current research, practical discussions, and realistic cases capture the breadth and depth of the modern teaching experience while a warm, engaging writing style makes the text a pleasure to read. Ideal for Foundations of Education and Introduction to Teaching courses designed to provide preservice teachers with an overview of the profession.

Teaching mathematics in seven countries : results from the TIMSS 1999 video study, **Understanding and Developing Science Teachers' Pedagogical Content Knowledge** John Loughran, Amanda Berry, Pamela Mulhall, 2012-07-31. There has been a growing interest in the notion of a scholarship of teaching. Such scholarship is displayed through a teacher's grasp of and response to the relationships between knowledge of content teaching and learning in ways that attest to practice as being complex and interwoven. Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge for many teachers is tacit. Pedagogical Content Knowledge (PCK) offers one way of capturing, articulating, and portraying an aspect of the scholarship of teaching and in this case, the scholarship of science teaching. The research underpinning the approach developed by Loughran, Berry, and Mulhall offers access to the development of the professional knowledge of science teaching in a form that offers new ways of sharing and disseminating this knowledge. Through this Resource Folio approach comprising CoRe and PaP eRs, a recognition of the value of the specialist knowledge and skills of science teaching is not only highlighted but also enhanced. The CoRe and PaP eRs methodology offers an exciting new way of capturing and portraying science teachers' pedagogical content knowledge so that it might be better understood and valued within the profession. This book is a concrete example of the nature of scholarship in science teaching that is meaningful, useful, and immediately applicable in the work of all science teachers, preservice, in-service, and science teacher educators. It is an excellent resource for science teachers as well as a guiding text for teacher education. Understanding teachers' professional knowledge is critical to our efforts to promote quality classroom practice. While PCK offers such a lens, the construct is abstract. In this book, the authors have found an interesting and engaging way of making science teachers' PCK concrete, useable, and meaningful for researchers and teachers alike. It offers a new and exciting way of understanding the importance of PCK in shaping and improving science teaching and learning. Professor Julie Gess-Newsome, Dean of the Graduate School of Education, Willamette University. This book contributes to establishing CoRes and PaP eRs as immensely valuable tools to illuminate and describe PCK. The text provides concrete examples of CoRes and PaP eRs completed in real-life teaching situations that make stimulating reading. The
