Morford,2024-01-31 Understanding Signed Languages provides a broad and accessible introduction to the science of language with evidence drawn from signed languages around the world Readers will learn about language through a unique set of signed language studies that will surprise them with the diversity of ways human languages achieve the same functional goals of communication Designed for students with no prior knowledge of signed languages or linguistics this book features A comprehensive introduction to the

sub fields of linguistics including sociolinguistics linguistic structure language change language acquisition and bilingualism Examples from more than 50 of the world s signed languages and a brief Language in Community snapshot in each chapter highlighting one signed language and the researchers who are documenting it Opportunities to reflect on how language ideologies have shaped scientific inquiry and contributed to linguistic bias Review and discussion questions useful websites and pointers to additional readings and resources at the end of each chapter Understanding Signed Languages provides instructors with a primary or secondary text to enliven the discourse in introductory classes in linguistics interpreting deaf education disability studies cognitive science human diversity and communication sciences and disorders Students will develop an appreciation for the language specific and universal characteristics of signed languages and the global communities in which they emerge   Visual Database Systems 3 Stefano Spaccapietra,Ramesh Jain,1995-09-30 Both the way we look at data through a DBMS and the nature of data we ask a DBMS to manage have drastically evolved over the last decade moving from text to images and to sound to a lesser extent Visual representations are used extensively within new user interfaces Powerful visual approaches are being experimented for data manipulation including the investigation of three dimensional display techniques Similarly sophisticated data visualization techniques are dramatically improving the understanding of the information extracted from a database On the other hand more and more applications use images as basic data or to enhance the quality and richness of data manipulation services Image management has opened a wide area of new research topics in image understanding and analysis The IFIP 2 6 Working Group on Databases strongly believes that a significant mutual enrichment is possible by confronting ideas concepts and techniques supporting the work of researcher and practitioners in the two areas of visual interfaces to DBMS and DBMS management of visual data For this reason IFIP 2 6 has launched a series of conferences on Visual Database Systems The first one has been held in Tokyo 1989 VDB 2 was held in Budapest 1991 This conference is the third in the series As the preceding editions the conference addresses researchers and practitioners active or interested in user interfaces human computer communication knowledge representation and management image processing and understanding multimedia database techniques and computer vision
