

I have a Kubota mower deck RC60-71B, the gear box oil leaked out and I need a top bearing (first one to overheat) and the oil seal at the bottom of the gear box (where the oil leaked out). I have removed the top bearing no problem, but I can't tell just what to do next to remove the lower bearing(7) to get to the oil seal. Can anyone help me with a short step-by-step explanation?

Answer: remove (4) gear box mounting bolts #310 and the gear box just lifts straight up, and the lower bearing and oil seal comes up and out with the gear box; and the pulley and pulley drive shaft #250 remains in place. You may need to pry slightly between the bottom of the gear box and the top of the pulley to break the slight adhesion between the lower bearing and oil seal, and the pulley drive shaft.
