Outsourcing Economics William Milberg, Deborah Winkler, 2013-04-29 Outsourcing Economics has a double meaning First it is a book about the economics of outsourcing Second it examines the way that economists have understood globalization as a pure market phenomenon and as a result have outsourced the explanation of world economic forces to other disciplines Markets are embedded in a set of institutions labor government corporate civil society and household that mold the power asymmetries that influence the distribution of the gains from globalization In this book William Milberg and Deborah Winkler propose an institutional theory of trade and development starting with the growth of global value chains international networks of production that have restructured the global economy and its governance over the past twenty five years They find that offshoring leads to greater economic insecurity in industrialized countries that lack institutions supporting workers They also find that offshoring allows firms to reduce domestic investment and focus on finance and short run stock movements

Decision Making with the Analytic Network

Process Thomas L. Saaty, Luis G. Vargas, 2006-09-10 The Analytic Network Process ANP developed by Thomas Saaty in his work on multicriteria decision making applies network structures with dependence and feedback to complex decision making This book is a selection of applications of ANP to economic social and political decisions and also to technological design The chapters comprise contributions of scholars consultants and people concerned about the outcome of certain important decisions who applied the Analytic Network Process to determine the best outcome for each decision from among several potential outcomes The ANP is a methodological tool used to organize knowledge and thinking elicit judgments registered in both in memory and in feelings quantify the judgments and derive priorities from them and finally synthesize these diverse priorities into a single mathematically and logically justifiable overall outcome In deriving this outcome the ANP also allows for the representation of diverse opinions in the midst of discussion and debate

Supply Chain Games: Operations Management and Risk Valuation Konstantin Kogan, Charles S. Tapiero, 2007-09-05 In today s global economy supply chains are an essential ingredient to corporate survival and growth Operations strategy in supply chains must assume an ever expanding and strategic role of risks that modern enterprises face when they operate in an interdependent supply chain environment These operational and strategic facets entail a brand new set of operational problems and risks that have not always been understood or managed very well It falls to supply chain managers to identify and to educate corporate managers on what these critical operational problems and risks involve Supply Chain Games Operations Management and Risk Valuation provides business students and practitioners with the means to understand to model and to analyze these outstanding issues and problems that are the essential elements in managing supply chains today

Building Supply Chain Excellence in Emerging Economies Hau L. Lee, Chung-Yee Lee, 2007-12-14 xv Global Supply Chain General Strategies and Framework There are five chapters on the general strategies and framework In On the Globalization of Operations and Supply Chain Strategies A Conceptual Framework and its Applications Panos Kouvelis and Julie Niederhoff describe the forces that shape globalization and a framework to develop strategies The authors illustrate how the framework can be used with the case of Acrilan an acrylic fiber manufacturer As the emerging economies begin to mature and the supply and demand points in a supply chain begin to shift companies need to re-optimize the design of their global supply chain so as to make the best use of their global resources This is the subject of Globalization and Emerging Markets The Challenge of Continuous Global Network Optimization by Peter Koudal and Douglas A Engel Many emerging economies have lower direct labor costs and are so attractive offshoring locations But there could be many hidden costs The decision to offshore has to be based on a sound comprehensive analysis of the total landed costs the tradeoffs of associated risks and the business strategies of the company David Pyke provides us with the approach to tackle this decision and share with us his personal experience in helping companies to make such decisions in his chapter titled Shanghai or Charlotte The Decision to Outsource to China and Other Low Cost Countries

Principles of Mathematics in Operations Research Levent Kandiller, 2006-12-18 Principles of Mathematics in Operations Research is a comprehensive survey of the mathematical concepts and principles of industrial mathematics Its purpose is to provide students and professionals with an understanding of the fundamental mathematical principles used in Industrial Mathematics OR in modeling problems and application solutions All the concepts presented in each chapter have undergone the learning scrutiny of the author and his students The conceptual relationships within the chapter material have been developed in the classroom experience working with the students level of understanding The illustrative material throughout the book i.e. worked out problems and examples of the mathematical principles was refined for student comprehension as the manuscript developed through its iterations and the chapter exercises are refined from the previous year's exercises In sum the author has carefully developed a pedagogically strong survey textbook of OR and

Industrial Mathematics Time-Varying Network Optimization Dan Sha, C. K. Wong, 2007-05-05 Network flow optimization problems may arise in a wide variety of important fields such as transportation telecommunication computer networking financial planning logistics and supply chain management energy systems etc Significant and elegant results have been achieved on the theory algorithms and applications of network flow optimization in the past few decades See for example the seminal books written by Ahuja Magnanti and Orlin 1993 Bazaraa Jarvis and Sherali 1990 Bertsekas 1998 Ford and Fulkerson 1962 Gupta 1985 Iri 1969 Jensen and Barnes 1980 Lawler 1976 and Minieka 1978 Most network optimization problems that have been studied up to date are however static in nature in the sense that it is assumed that it takes zero time to traverse any arc in a network and that all attributes of the network are constant without change at any time Networks in the real world are nevertheless time varying in essence in which any flow must take a certain amount of time to traverse an arc and the network structure and parameters such as arc and node capacities may change over time In such a problem how to plan and control the transmission of flow becomes very important since waiting at a node or travelling along a particular arc with different speed may allow one to catch the best timing along his path and therefore achieve his overall objective such as a minimum overall cost or a minimum travel time from the origin to the destination *Soft Computing for Complex Multiple Criteria Decision Making* Ignacy Kaliszewski, 2006-06-07 Dapprima importa sapere di che cosa si tratta The first thing is to know what the talk is about Attributed to Vilfredo Pareto This book results from my continuous and deep interest in multiple criteria decision making MCDM Eleven years ago I wrote in my previous monograph This work results from my interest in the field of vector optimization I stumbled first upon this subject in 1982 I was attracted then by a gap between vector optimization used to serve as a formal model for multiple objective decision problems and the decision problems themselves the gap nonexistent in scalar optimization Roughly speaking vector optimization provides methods for ranking decisions according to a partial order whereas decision making requires a linear ordering of decisions This declaration is still valid and nothing needs to be changed To be more specific this book is a fruit of my dissatisfaction with the current state of the art of MCDM MCDM is a branch of science whose declared ultimate goal is to provide practical tools However we cannot say and this is regrettable that all present MCDM methods and algorithms are in popular use by those who make complex decisions and for that purpose are in need of methodological or computational support Logic and Integer Programming H. Paul Williams, 2009-04-09 Paul Williams a leading authority on modeling in integer programming has written a concise readable introduction to the science and art of using modeling in logic for integer programming Written for graduate and postgraduate students as well as academics and practitioners the book is divided into four chapters that all avoid the typical format of definitions theorems and proofs and instead introduce concepts and results within the text through examples References are given at the end of each chapter to the more mathematical papers and texts on the subject and exercises are included to reinforce and expand on the material in the chapter Methods of solving with both logic and IP are given and their

connections are described Applications in diverse fields are discussed and Williams shows how IP models can be expressed as satisfiability problems and solved as such

System Signatures and their Applications in Engineering Reliability Francisco J. Samaniego, 2007-09-04 Since the introduction of system signatures in Francisco Samaniego's 1985 paper the properties of this technical concept have been examined tested and proven in a wide variety of systems applications Based on the practical and research success in building reliability into systems with system signatures this is the first book treatment of the approach Its purpose is to provide guidance on how reliability problems might be structured modeled and solved

Supply Chain Analysis Christopher S. Tang, Chung-Piaw Teo, Kwok-Kee Wei, 2007-11-28 Supply Chain Analysis A Handbook on the Interaction of Information System and Optimization is a carefully developed work focused on the analysis of supply chain interaction issues in emerging markets and industry sectors It is a leading edge handbook that will emphasize where little work has been done and where the rubber meets the road the supply chain process information and systems integration These are pertinent issues facing practitioners and researchers in today's business environment This is a gap bridging handbook that analyzes interaction issues from both the research and practitioner sides The result is a volume that examines and provides practical solutions on interaction issues while being firmly grounded in research principles An outstanding team of editors Chris Tang is well known and highly regarded in the area of Supply Chain Management He is both a department chairman and the Edward Carter Professor of Business Administration at UCLA Anderson School Professor Wei is the Dean of the Faculty of Business at the City University of Hong Kong and is an eminent scholar in the area of Information Technology Professor Teo has extensive experience in the area of Supply Chain Management and Optimization and he is with the NUS Business School at the National University of Singapore
