acceptance of chaos is less emotional among professionals than it has been in some popular publications. Analytical methods appear to have reached a state in which basic results of singularities, symmetry groups or normal forms are everyday experience rather than exciting news. Similarly, numerical algorithms for frequent situations are now well established. Implemented in several packages, such algorithms have become standard means for attacking nonlinear problems. The sophistication that analytical and numerical methods have reached supports the vigorous trend to more and more applications. Pioneering equations as those named after Duffing, Van der Pol or Lorenz are no longer exclusively the state of art.
