Berkeley Physics Course—Vol. II

Professor of Physics
Harvard University

© 1998 Blackwell Science Ltd *Journal of Internal Medicine* 243: 395–401

This material on particular solutions is introduced primarily as an aid to instructors teaching from the second volume of the Berkeley Physics Course. They will, I hope, find the material a useful supplement to the text. The solutions for the more routine problems often include some explanations going beyond the bare requirements of the problem. The instructor would be well advised to peruse the solutions for the more condition problems before he assigns them -- if only to be warned of traps which were not always foreseen when the problems were devised.

The solutions were checked by Thomas Knight, who found some were and made many valuable suggestions for improvement and clarification. Gary Lindstrom who feels that the course in his class would be improved if he realized that the author made some mistakes in working his own problems in order to be able to do such numerical errors may still turn up. Notice of such would be most welcome, but would any other suggestion for improvement of the material in the manual. Please address any suggestions to the undersigned at Lyman Laboratory, Harvard University, Cambridge, Mass. 02138.

Appropriate parts of this manual may be detached and posted, or with copyright notice displayed, may be reproduced in part in members for the library. We do not, however, recommend that the entire manual be made available to students.
