SCIAAS.2.1 - Physical Properties of Substances

Everything around us is made up of different materials, and we can describe these materials by looking at their physical properties. Some things feel smooth, like glass, while others feel rough, like sandpaper. Some objects are soft, like a cotton ball, and others are hard, like a rock. We can also talk about size, color, shape, and if something is heavy or light. Knowing these properties helps us understand the world and choose the right materials for different uses.

SCIAAS.2.2 - Uses of Natural and Manufactured Materials

Some materials come from nature, like wood from trees or cotton from plants, and others are made by people, like plastic or glass. We use materials based on their properties. A raincoat is made from waterproof material to keep us dry, while a sweater is made from soft fabric to keep us warm. We use metal to build strong bridges, and we use rubber for tires because it is flexible and sturdy. By knowing the properties of materials, we can use them in the best way.

SCIAAS.2.3 - Building and Disassembling Structures

People build things by putting materials together, and sometimes, we take them apart to change or fix them. For example, when we build with blocks, we stack them to make a tower, but we can also take them apart and build something new. Buildings, cars, and toys are made by putting different parts together in a special way. If something breaks or needs to be changed, we can take it apart and rebuild it in a better way.
