

Figure 10: Monopolistic Competition in the Short Run

1. **Profit-maximizing firms produce different levels of output and charge different prices** than the short-run price of a purely competitive industry. Indeed, there is an **excess demand** in monopolistic and the perfectly competitive market since facing an individual firm (especially monopolistic industry), each firm's demand curve, marginal revenue schedule, average revenue schedule and profit curve is different. As a result, each monopolistic firm produces a higher price and profit level than in perfect competition.
2. **The short-run cost total cost schedule is independent of the degree of its monopoly**, which means it is identical regardless the firm size. Another characteristic feature can appear in all market structures, which is **price competition**. Each firm's short-run supply schedule is identical to the price paid (charged) and acts as a supply curve in the long-run market and costs.
3. **Over the short-run monopolistic equilibrium** characterizes the firm's short-run supply curve. During this chapter's cost schedule construction, remember that because the short-run supply curve is not the short-run cost curve.

4. **The short-run equilibrium**
